Teaching and Learning Through Inquiry Virginia S. Lee,2023-07-03 Inquiry guided learning IGL refers to an array of classroom practices that promote student learning through guided and increasingly independent investigation of complex questions and problems Rather than teaching the results of others investigations which students learn passively instructors assist students in mastering and learning through the process of active investigation itself IGL develops critical thinking independent inquiry students responsibility for their own learning and intellectual growth and maturity The 1999 Boyer Commission Report emphasized the importance of establishing a firm grounding in inquiry based learning and communication of information and ideas While this approach capitalizes on one of the key strengths of research universities the expertise of its faculty in research it is one that can be fruitfully adopted throughout higher education North Carolina State University is at the forefront of the development and implementation of IGL both at the course level and as part of a successful faculty led process of reform of undergraduate education in a complex research institution This book documents and explores NCSU s IGL initiative from a variety of perspectives how faculty arrived at their current understanding of inquiry guided learning and how they have interpreted it at various levels the individual course the major the college the university wide program and the undergraduate curriculum as a whole The contributors show how IGL has been dovetailed with other complementary efforts and programs and how they have assessed its impact The book is divided into four parts the first briefly summarizing the history of the initiative Part Two the largest

section describes how various instructors departments and colleges in a range of disciplines have interpreted inquiry guided learning It provides examples from disciplines as varied as ecology engineering foreign language learning history music microbiology physics and psychology It also outlines the potential for even broader dissemination of inquiry guided learning in the undergraduate curriculum as a whole Part Three describes two inquiry guided learning programs for first year students and the interesting ways in which NCSU s university wide writing and speaking program and growing service learning program support inquiry guided learning Part Four documents how the institution has supported instructors and how they have supported themselves as well as the methods used to assess the impact of inquiry guided learning on students faculty and the institution as a whole The book has been written with three audiences in mind instructors who want to use inquiry guided learning in their classrooms faculty developers considering supporting comparable efforts on their campuses and administrators interested in managing similar undergraduate reform efforts It will also appeal to instructors of courses in the administration of higher education who are looking for relevant case studies of reform While this is a model successfully implemented at a research university it is one that is relevant for all institutions of higher education

Rivera Maulucci,Stephanie Pfirman,Hilary S. Callahan,2023-06-20 This book investigates how educators and researchers in the sciences social sciences and the arts connect concepts of sustainability to work in their fields of study and in the classrooms where they teach the next generation Sustainability with a focus on justice authenticity and inclusivity can be integrated into many different courses or disciplines even if it is beyond their historical focus The narratives describe sustainability education in the classroom the laboratory and the field broadly defined and how the authors navigate the complexities of particular sustainability issues such as climate change water quality soil health biodiversity resource use and education in authentic ways that convey their complexity the sociopolitical context and their hopes for the future The chapters explore how faculty engage students in learning about sustainability and the ways in which working at the edge of what we know about sustainability can be a significant source of engagement motivation and challenge The authors discuss how they create learning experiences that foster democratic practices in which students are not just following protocols but have a stake in creative decision making collecting and analysing data and posing authentic questions They also describe

what happens when students are not just passively receiving information but actively analysing debating dialoguing arguing from evidence and constructing nuanced understandings of complex socioscientific sustainability issues The narratives include undergraduate student perspectives on what it means to engage in sustainability research and learning how students navigate the complexities and contradictions inherent in sustainability issues what makes for authentic empowering learning experiences and how students are encouraged to persevere in the field This is an open access book
