Analysing Users' Interactions with Khan Academy Repositories Sahar Yassine, Seifedine Kadry, Miguel-Ángel Sicilia, 2021-11-15 This book addresses the need to explore user interaction with online learning repositories and the detection of emergent communities of users This is done through investigating and mining the Khan Academy repository a free open access popular online learning repository addressing a wide content scope It includes large numbers of different learning objects such as instructional videos articles and exercises The authors conducted descriptive analysis to investigate the learning repository and its core features such as growth rate popularity and geographical distribution The authors then analyzed this graph and explored the social network structure studied two different community detection algorithms to identify the learning interactions communities emerged in Khan Academy then compared between their effectiveness They then applied different SNA measures including modularity density clustering coefficients and different centrality measures to assess the users behavior patterns and their presence By applying community detection techniques and social network analysis the authors managed to identify learning communities in Khan Academy's network The size distribution of those communities found to

follow the power law distribution which is the case of many real world networks Despite the popularity of online learning repositories and their wide use the structure of the emerged learning communities and their social networks remain largely unexplored This book could be considered initial insights that may help researchers and educators in better understanding online learning repositories the learning process inside those repositories and learner behavior Computational Literacy for the Humanities Zef Segal,Nurit Melnik,2025-06-23 Computational Literacy for the Humanities provides an introduction to mathematics and programming that is specifically designed for use by those engaged in the humanities Linking mathematical concepts and computational skills the chapters in this book explore humanistic questions from diverse fields such as art history and literature The book helps to advance computational and digital literacy by showing that each mathematical concept has a history and each technique has a meaning Rather than viewing mathematics and computer programming as purely instrumental they are integrated into the process of achieving greater understanding of humanistic phenomena Algorithms data statistics and networks are taught critically within the book whilst the authors also make a concerted effort to expose the internal biases of these tools They also demonstrate the applicability of quantification and computation for the promotion of diversification and inclusivity within the humanities All exercises are designed as an opportunity to gain hands on mathematical and computational experience whilst critically exploring and interpreting humanistic phenomena Computational Literacy for the Humanities shows readers how to engage with data in a way that is challenging yet meaningful and empowering It will be of interest to scholars and students working across the humanities and should be of particular interest to those working in digital humanities Semantic Web Technologies Archana Patel,Narayan C.
