Status of Human Factors Engineering System Design in Europe Geoffrey Ives, 1990 A review of the European status of human factors engineering has been carried out covering a wide scope of activities which includes psychology cognitive science ergonomics design training procedure writing operating artificial intelligence and expert systems There is an increasing awareness of the part that human factors play in major nuclear power plant accidents The emphasis of attention in human factors is changing In some areas there are encouraging signs of progress and development but in other areas there is still scope for improvement

Applied Human Factors in Medical Device Design Mary Beth Privitera, 2019-06-15 Applied Human Factors in Medical Device Design describes the contents of a human factors toolbox with in depth descriptions of both empirical and analytical methodologies

The book begins with an overview of the design control process integrating human factors as directed by AAMI TIR 59 and experienced practice. It then explains each method describing why each method is important, its potential impact when it is ideal to use, and related challenges. Also discussed are other barriers such as communication breakdowns between users and design teams. This book is an excellent reference for professionals working in human factors, design, engineering, marketing, and regulation. Focuses on meeting agency requirements as it pertains to the application of human factors in the medical device development process in both the US and the European Union (EU). Explains technology development and the application of human factors throughout the development process. Covers FDA and MHRA regulations. Includes case examples with each method.

Designing for Humans John H. Burgess, 1986 *Human Factors Engineering Aspects of Instrumentation and Control System Design* International Atomic Energy Agency, 2021-05-30. Safety, reliability, and productivity in the nuclear industry result from a systematic consideration of human performance. A plant or other facility consists of both the engineered system and the human users of that system. It is therefore crucial that engineering activities consider the humans who will be interacting with those systems. Engineering design, specifically instrumentation and control (I/C) design, can influence human performance by driving how plant personnel carry out work and respond to events within a nuclear power plant. As a result, human system interfaces (HSIs) for plant operators, as well as the maintenance and testing of the I/C system, cannot be designed by isolated disciplines. The focus of this publication is to integrate knowledge from the disciplines of human factors, engineering, HFE, and I/C to emphasize an interdisciplinary approach for the design of better HSIs and consequently improved human performance in nuclear power plants. This is accomplished by practical explanations of the HFE processes and corresponding outputs that inform the I/C development. More specifically, the publication addresses issues in the design process where collaboration between HFE, I/C, and other important disciplines and stakeholders is paramount and identifies key tools and tasks for exchanging inputs and outputs between different design disciplines, particularly I/C and HFE. The practical information provided in this publication is intended to support Member States' capabilities to improve their approach to I/C through the consideration of HFE.
