

(a) Adult. The adult fly is segmented, and multiple segments make up each of the three main body parts—head, thorax, and abdomen. The body axes are shown by arrows.

(b) Development from egg to larva.

1 Developing egg within one ovarian follicle (among many in an ovary). The egg (yellow) and nurse cells are surrounded by follicle cells.

2 Mature, unfertilized egg. The developing egg enlarges as nutrients and mRNAs are supplied to it by the nurse cells, which shrink. Eventually, the mature egg fills the eggshell that has been secreted by the follicle cells.

3 Fertilized egg. The egg is fertilized within the mother and then laid.

Fertilization
Laying of egg

4 Segmented embryo. The egg develops into a segmented embryo.

Embryonic development

5 Larva. The embryo develops into a larva, which has three stages. The third stage forms a pupa (not shown), within which the larva metamorphoses into the adult shown in (a).
