

Discovering and Proving Circle Properties

Content Summary

In Chapter 6, students continue to build their understanding of geometry as they explore properties of circles. Some of these properties are associated with line segments related to circles; other properties are associated with arcs and angles. A circle is defined as a set of points equidistant from a fixed point, its center.

Line Segments Related to Circles

The best-known line segments related to a circle are its radius and diameter. Actually, the word *radius* can refer either to a line segment between a point on the circle and the center, or to the length of such a line segment. Similarly, *diameter* means either a line segment that has endpoints on the circle and passes through the center, or the length of such a line segment.

The diameter is a special case because it is the longest *chord* of a circle; a chord is a line segment whose endpoints are on the circle. Another line segment associated with circles is a *tangent* segment, which touches the circle at just one point and lies on a *tangent line*, which also touches the circle at just one point and is perpendicular to the radius at this point. Students learned about these segments in Chapter 1, and Lesson 6.1 provides a quick review.

Arcs and Angles

A piece of the circle itself is an *arc*. If you join each endpoint of an arc to the center of the circle, you form the *central angle* that intercepts the arc. The size of the arc can be expressed in degrees—the number of degrees in the arc's central angle. This chapter explores several such relationships among arcs, angles, and segments. Students also write paragraph and flowchart proofs to confirm the universality of these relationships.

The size of the arc can also be expressed in length. The arc length is calculated by using the total circumference, or the distance around the circle. The number π is defined to be the circumference of any circle divided by that circle's diameter; or, the circumference is π times the diameter. For example, if an arc is $\frac{1}{4}$ of the complete circle, then its central angle measures $\frac{1}{4}$ of 360° , and its length is $\frac{1}{4}$ of the circle's circumference.

Summary Problem

Draw a diagram of a central angle intercepting a chord of a circle and its arc, as shown in the picture.

Move points *A*, *B*, and *C* to different locations to illustrate the ideas of the chapter.

Questions you might ask in your role as student to your student:

- What concepts are illustrated in the original drawing?
- How could you move each of the points *A*, *B*, and *C* to show an inscribed angle?
- How could you move each of the points *A*, *B*, and *C* to show tangent segments?

web aug 28 2023 a collection of matlab routines for illustrating methods for identifying radial basis function neural network models for narx type nonlinear dynamical systems

response analysis and controlling the nonlinear vibration of - Oct 04 2022

web this tutorial is intended to provide a crash course on using a small subset of the features of matlab if you complete the whole of this tutorial you will be able to use matlab to

[nonlinear vibration analysis using matlab](#) - Sep 22 2021

study of nonlinear aerodynamic self excited force in flutter - Nov 24 2021

web nonlinear vibration analysis using matlab getting the books nonlinear vibration analysis using matlab now is not type of challenging means you could not solitary

nlvib institut für luftfahrtantriebe universität stuttgart - Jul 13 2023

web nonlinear using simulink a further example is shown in appendix h where manoeuvres and gust encounters are considered the program pgm f 1 2 num integration is shown

nonlinear dynamics github topics github - Apr 10 2023

web oct 25 2014 the gui uses single harmonic describing functions to calculate the force induced by the nonlinearity in frequency domain since it uses only single harmonic to

dynamics and vibrations matlab tutorial - Aug 02 2022

web jun 30 2018 in this research work a simple two degree of freedom landing gear model having nonlinear characteristics has been developed in matlab simulink and in order to

nonlinear forced vibration and stability analysis of nonlinear - Jan 07 2023

web this nonlinear vibration analysis using matlab as one of the most lively sellers here will completely be in the course of

the best options to review data science in engineering
