**Abstract** PURPOSE Accurately forecasting real estate prices presents a significant challenge due to the complex interplay of economic social and spatial variables Artificial Intelligence AI offers a promising avenue to enhance predictive accuracy by integrating advanced analytical techniques This study examines the role of AI in real estate pricing by identifying prevailing research trends and assessing its practical applications in cost reduction process automation and decision making

**METHODOLOGY** A two pronged approach was employed combining bibliometric analysis with insights from expert interviews The bibliometric study mapped the evolution of AI related research in real estate highlighting key themes and methodological trends The case study analysis provided complementary insights into how AI is applied in industry practice particularly in streamlining construction processes automating asset monitoring and enhancing marketing strategies

**FINDINGS** The study identifies a growing academic interest in AI driven real estate research particularly since 2018 with an increasing focus on machine learning deep learning and geospatial analysis While scholarly research aligns with market needs in price forecasting and decision support gaps remain in topics like operational efficiency and automation Empirical evidence suggests that AI applications extend beyond price estimation influencing profitability through process acceleration and cost optimization However international collaboration in the field remains low limiting the scalability of AI driven pricing models across different market contexts

**IMPLICATIONS** The findings underscore AI s transformative impact on real estate by bridging research and industry applications Theoretically the study highlights the shift from management oriented frameworks toward data driven and algorithmic approaches AI enhances price estimation by integrating diverse data sources and improving risk assessment However challenges persist including data accessibility algorithm interpretability and the demand for specialized AI expertise Addressing these issues could unlock further advancements in predictive modeling and real estate market efficiency

**ORIGINALITY AND VALUE** This research provides a comprehensive perspective on AI s role in real estate pricing by integrating bibliometric analysis with case study insights It extends existing knowledge by identifying key research gaps emphasizing the need for interdisciplinary collaboration and demonstrating AI s potential beyond price prediction to broader market dynamics and operational efficiencies

evaluating their ability to predict entrepreneurial outcomes Additionally it extends bricolage theory by highlighting its behavioral dimensions shifting its focus from improvisation to a dynamic problem solving process These contributions provide a richer theoretical perspective on how student entrepreneurs navigate uncertainty and leverage limited resources to drive venture creation

**What shapes entrepreneurial activity in the European Union** Tomasz Skica Marcin J Pi tkowski Ademir Abdi Lejla Lazovi Pita <https://doi.org/10.7341/20252134>

**Citation** Skica T Pi tkowski M J Abdi A Lazovi Pita L 2025 What shapes entrepreneurial activity in the European Union *Journal of Entrepreneurship Management and Innovation* 21 3 77 100 <https://doi.org/10.7341/20252134>

**Abstract**

**PURPOSE** The aim of the article is to identify the factors influencing entrepreneurial activity in the European Union EU countries In addition to achieve the research goal the authors provide answers to two research questions RQ1 What sets and types of variables influence entrepreneurial activity in the EU Member States and RQ2 Based on the defined factors influencing entrepreneurial activity is there a difference between the old and new EU Member States

**METHODOLOGY** Using panel regression analysis on the data from the 2009 2018 period the article attempts to identify factors influencing entrepreneurial activity among EU countries Furthermore an examination of possible differences in entrepreneurial activity between the old and new EU Member States is conducted By using variables that statistically significantly explain entrepreneurial activity a heatmap was created This made it possible to visualise differences between countries within each variable as well as the impact of each variable on the analysed group of old and new EU Member States

**FINDINGS** Our research indicates that entrepreneurial activity is higher in new EU Member States than in older ones influenced by factors categorized into Human Capital and Institutional Conditions Regarding Human Capital higher entrepreneurial activity is associated with lower employment in the high tech sector higher HDI greater participation in non formal education and a larger share of periodically employed individuals Conversely lower entrepreneurial activity correlates with a higher proportion of young people not in employment education or training and emigration Notably advanced digital skills impact on entrepreneurial activity but their absence does not constitute a barrier to business creation Among the Institutional variables higher entrepreneurial activity is linked to tax burden EU membership duration and eurozone membership length However the Business Freedom indicator does not significantly affect entrepreneurial activity

**IMPLICATIONS** Considering the EU s strategy and the importance of entrepreneurial activity across EU Member States policy implications emphasize the need for tailored policies that support business activity aiming to minimize inter country differences and boost economic growth

**ORIGINALITY AND VALUE** Unlike prior studies that mainly compare entrepreneurship between broad economic regions our research uniquely distinguishes between new and old EU Member States revealing significant disparities in entrepreneurial activity and its determinants

with a family firm's digital innovation activities

**METHODOLOGY** The study was conducted on a sample of Polish family firms. In total, 501 self-declared family businesses that represent the SME sector were completed. Structural Equation Modeling (SEM) was employed to capture underlying relationships between latent constructs and to verify hypotheses.

**FINDINGS** The findings indicate that the leader's digital innovativeness has a significant impact on the digital innovation activities of family firms. However, the achievement of these outcomes depends on the existence of complementary organizational factors, including IT capabilities, employee digital competencies, and a strong digital culture. These results emphasize the interconnected relationship between the leader's innovativeness and organizational resources in facilitating digital transformation within family businesses.

**IMPLICATIONS** This research highlights the necessity for family-owned businesses to invest in leadership development programs that foster digital innovativeness, enabling leaders to effectively navigate digital transformation and enhance the company's overall resilience. Additionally, cultivating a supportive digital culture through collaboration, advanced digital tools, and an innovation-driven mindset ensures that the entire organization aligns with digital transformation goals, ultimately driving long-term competitiveness.

**ORIGINALITY AND VALUE** This paper contributes to the literature on family firms by presenting the association between leader's digital innovativeness and digital innovation activities in family firms. We offer new evidence for the upper echelons theory by demonstrating the impact of the leader's digital innovativeness on digital innovation activities.

**Keywords:** digital innovativeness, family firms, digital innovation activities, leadership, digital transformation, upper echelons theory, small and medium-sized enterprises (SMEs), IT capabilities, organizational digital capabilities, employee digital competencies, digital culture, family business, Structural equation modeling (SEM).

**The Philosopher's Stone for Sustainability** Yoshiki Shimomura, Koji Kimita, 2012-09-26. Industrial Product Service Systems (IPSS) which is defined as an integrated industrial product and service offering that delivers value in use, has expanded rapidly over the last decade. IPSS has allowed us to achieve both high added value and high productivity and has enriched our QOL by improving the performance of products and services. We are now struggling with many awkward issues related to sustainability, but IPSS is expected to be the philosopher's stone for solving these issues. Following the pattern of conferences held in Cranfield in 2009, Linköping in 2010, and Braunschweig in 2011, the fourth International CIRP Conference on Industrial Product Service Systems held on

November 8 9 2012 in Tokyo will cover various aspects of IPS2 Topics planned for this year s conference reflect the latest IPS2 information in both the natural sciences and humanities and include case studies from various industries IPS2 is still a relatively new field so it is important to keep track of the entire context in order to promote more cross sectional cooperation between multimodal fields and disciplines The fourth International CIRP Conference on Industrial Product Service Systems will serve as a vital platform for such collaborations and the discussion of new scientific ideas

Transportation Research Department, 1968 *EU-NATO Relations* Simon J. Smith, Carmen Gebhard, Nina Graeger, 2020-04-28 For almost fifteen years both the EU and North Atlantic Treaty Organization NATO have claimed to partake in a relationship that is purported to be a Strategic Partnership albeit one that is troubled by lasting political blockages The constraints that affect the formal relationship between the two organizations are well covered terrain in the academic literature including by most of the contributors to this volume however the popular argument that the EU and NATO simply do not cooperate in any substantive way warrants deeper investigation both theoretically and thematically Thus EU NATO relations might not at first seem like an under researched area but much of the existing literature on the issue re engages oversimplified and formulaic statements about the nature quality and practice of interactions between the EU and NATO This volume aims to develop the EU NATO research agenda by pursuing three key objectives 1 reduce the lacuna of theoretically informed analyses of the relationship 2 add empirically and analytically rigorous case studies to the relevant body of literature and 3 point to possible developments and solutions in the Strategic Partnership The chapters in this book were originally published as a special issue in European Security

*Case Studies in Interpersonal Communication* Dawn O. Braithwaite, Julia T. Wood, 2000 The many narrative cases in this book offer dramatic real life snapshots of interpersonal theory in action Written by established communication scholars and reflecting carefully conducted research each case helps you apply abstract principles to specific situations people and relationships As you read these cases you ll also learn to appreciate how multiple communication dynamics work together to shape what happens in human interactions for example how a case focusing on self disclosure also gives you insights into such issues as timing context and style of communication And as you identify patterns revealed in the cases you ll develop the ability to detect these patterns in your own interactions and ultimately make more informed choices about which patterns to foster and avoid in your interpersonal relationships
