Human Machine Interface-based Neuromodulation Solutions for Neurorehabilitation Jing Wang, Haoyong Yu, Jinhua Zhang, 2022-10-06 **Crosstalk between Peripheral and Local Immune Response in the Pathophysiology of Stroke and Neurodegeneration Diseases** Yuanjian Fang, Lei Huang, Xiangsheng Zhang, Anwen Shao, Jiping Tang, Dirk M. Hermann, 2023-12-27 **Gravitational Physiology, Aging and Medicine** Nandu Goswami, Olivier White, Jack J. W. A. van Loon, Andreas Roessler, Andrew Blaber, 2020-01-27 Neurocritical Care Board Review Asma Zakaria, 2013-07-19

Neurocritical Care Board Review Questions and Answers provides clinicians with a thorough review of the complex subspecialty of Neurocritical Care using a question and answer Q A format The Q A format is easily readable high yield and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge The book covers the key topics pertinent to and found on neurocritical care boards and is organized according to the exam core curriculum outline A total of 649 questions address both neuroscience critical care general neurology neurotrauma neurovascular and neurosurgical problems and general critical care topics systems trauma cardiovascular infectious disease pulmonary and renal issues and hemodynamic monitoring Detailed explanations follow in the answer section of each chapter along with references for further study Where relevant neuroimaging EEG and monitoring waveforms and other images are included in case questions to allow candidates to familiarize themselves with these tools that form a significant part of the exam Features of Neurocritical Care Board Review include Comprehensive high yield review that covers all areas tested on the neurocritical care certifying exam Applicability to a wide range of physicians in multiple specialties reviewing for boards or looking to test skills and clinical acumen in this challenging area Question and answer format with detailed explanations and references to facilitate recall of must know information and help identify knowledge gaps for further attention Material aggregated from multiple specialties into a singular resource for exam study **Listening with Two Ears - New Insights and Perspectives in Binaural Research** Huiming Zhang, Yi Zhou, Lina Reiss, 2023-11-27 Hearing is dependent on neural processing of acoustic cues obtained by the left and right ears Neural signals driven by the two ears are integrated at multiple levels of the central auditory system which enables animals including humans to perform various functions including localization of a sound source A natural listening environment typically contains sounds from multiple sources These sounds can have different spectral and temporal features and occur at either the same or different time Integration can happen among neural signals elicited by the same or different sounds The way of integration can greatly affect how individual sounds are sensed and perceived Functions such as auditory grouping and stream segregation which are central to establishing coherent auditory images in a complex listening environment are highly dependent on the way of integration Binaural hearing is complicated by individual differences and developmental changes in head and pinna shape size as binaural cues can be affected by these differences and changes Furthermore neural processing of binaural cues can be influenced by

hearing impairments and the use of hearing aids and cochlear implants These factors likely require a listener to optimize the use of binaural cues through learning and to use plastic changes in the nervous system to perform the optimization Great strides have been made in understanding binaural processing in normal and impaired auditory systems This Research Topic aims to highlight some of the latest findings in the following areas 1 Animal behavioral and human psychoacoustical studies of binaural hearing 2 Neural encoding and processing of binaural cues and structural as well as neurophysiological bases of such encoding and processing 3 Contribution of binaural neural processing to auditory functions such as sound source localization binaural fusion binaural interference spatial release from masking auditory grouping and auditory stream segregation 4 Computational models of binaural processing 5 Learning and plastic changes in binaural processing following hearing loss or alterations of acoustic environment and structural as well as physiological bases of these behavioral changes 6 Clinical aspects of binaural processing including application of processing strategies including research on the benefits of bilateral cochlear implantation and the neural correlates thereof

[Advances and controversies in ischemic stroke management: from prevention to diagnosis and acute treatment](#) Matteo Foschi, Raffaele Ornello, Lucio D'Anna, Giovanni Merlino, 2025-09-25 Stroke is a leading cause of mortality and the primary cause of disability worldwide with ischemic stroke accounting for approximately 70% of all cases globally Recent advancements in brain imaging techniques have significantly expanded the treatment window for reperfusion therapies in carefully selected patients resulting in improved functional outcomes in the short and long term Intravenous thrombolysis IVT has proven effective in reducing disability when administered for up to 9 hours in

patients with detectable salvageable brain tissue on perfusion imaging Endovascular thrombectomy EVT has emerged as a beneficial intervention for a wide range of patients with large vessel occlusion even up to 24 hours after stroke onset provided appropriate patient selection based on imaging criteria Conversely recent trials have demonstrated the superior efficacy of intensive pharmacological approaches such as dual antiplatelet therapy DAPT in preventing ischemic stroke recurrence particularly in high risk patients Despite significant advancements several controversies persist in the field of ischemic stroke management These controversies encompass various topics including determining the optimal secondary prevention strategy for patients with patent foramen ovale or strategies for ischemic stroke prevention in patients with atrial fibrillation following intracerebral hemorrhage Furthermore ongoing debates exist regarding the actual effectiveness of EVT in patients with large ischemic core distal vessel occlusion mild stroke syndromes or high baseline disability Additionally the comparative utility of IVT versus dual antiplatelet therapy for minor ischemic strokes remains a contentious issue Moreover discussions revolve around identifying the optimal delivery paradigm for EVT such as the choice between the drip and ship approach versus the mothership model
