Non-destructive Testing of Materials in Civil Engineering Krzysztof Schabowicz, 2019-11-18 This book was proposed and organized as a means to present recent developments in the field of nondestructive testing of materials in civil engineering For this reason the articles highlighted in this editorial relate to different aspects of nondestructive testing of different materials in civil engineering from building materials to building structures The current trend in the development of nondestructive testing of materials in civil engineering is mainly concerned with the detection of flaws and defects in concrete elements and structures and acoustic methods predominate in this field As in medicine the trend is towards designing test equipment that allows one to obtain a picture of the inside of the tested element and materials From this point of view interesting results with significance for building practices have been obtained Non-destructive Testing and Evaluation of Civil Engineering Structures Jean-Paul Balayssac, Vincent Garnier, 2017-11-22 The non destructive evaluation of civil engineering structures in reinforced concrete is becoming an increasingly important issue in this field of engineering This book proposes innovative ways to deal with this problem through the characterization of concrete durability indicators by the use of non destructive techniques It presents the description of the various non destructive techniques and their combination for the evaluation of indicators The processing of data issued from the combination of NDE methods is also illustrated through examples of data fusion methods The identification of conversion models linking observables obtained from non destructive measurements to concrete durability indicators as well as the consideration of different sources of variability in the assessment process are also described An analysis of in situ applications is carried out in order to highlight the practical aspects of the methodology At the end of the book the authors provide a methodological guide detailing the proposed non destructive evaluation methodology of concrete indicators Presents the latest developments performed in the

community of NDT on different aspects Provides a methodology developed in laboratory and transferred onsite for the evaluation of concrete properties which are not usually addressed by NDT methods Includes the use of data fusion for merging the measurements provided by several NDT methods Includes examples of current and potential applications
