*Small Farm Handbook, 2nd Edition* Laura Tourte, Ben Andrews Faber, 2011 Since its publication in 1994 the Small Farm Handbook has been an essential resource for California's small farmers and the agricultural professionals advising them selling over 4300 copies Now this invaluable reference has been updated and expanded for today's small scale producers The handbook covers three essential areas Background skills and knowledge the business side and the farming side Within these broad areas you'll find specific chapters on Requirements for Successful Farming Growing Crops Raising Animals Farm and Financial Management Marketing and Product Sales Labor Management Also included are profiles of six small farm operators representing a sample of California's diverse agriculture Throughout you'll get a look at emerging trends and issues for California agriculture and innovative methods for better production and management all of which can lead to better farm performance Drawing upon the knowledge of 32 experts from the University of California No other publication covers the topics issues and facets of California's small scale agriculture with this depth or level of expertise From the basics to risk management specialty crops to marketing and product sales this guide covers the gamut *The Role of Post-harvest Management in Assuring the Quality and Safety of Horticultural Produce* Adel A. Kader, Rosa Sonya Rolle, Food and Agriculture Organization of the United Nations, 2004-01-01 Basic approaches to maintaining the safety and quality of horticultural produce are the same regardless of the market to which this produce is targeted This bulletin reviews the factors which contribute to quality and safety deterioration of horticultural produce and describes approaches to assuring the maintenance of quality and safety throughout the post harvest chain Specific examples are given to illustrate the economic implications of investing in and applying proper post harvest technologies Criteria for the assessment of post harvest needs the selection of post harvest technologies appropriate to the situation and context and for extending appropriate levels of post harvest information are also discussed *Post-Harvest Physiology and Crop Preservation* Morris Lieberman, 2012-12-06 Emphasis in agricultural research for many years has concentrated on crop production This emphasis has become more important in recent years with the realization that the population worldwide is outstripping the food supply There is however another side to increasing the availability of the food supply This simply involves preservation of the harvested crop for human consumption The losses incurred in harvesting handling transportation storage and marketing crops have become a greater problem as the distance from the farm to the ultimate consumer increases In the Western world where modern transportation storage facilities and marketing technology are widely used post harvest technology requires a large input of energy which increases costs considerably Therefore losses are more significant and the ability to provide fresh fruits and vegetables out of season at reasonable costs will depend on reduced post harvest losses throughout the marketing chain from the farm gate to the ultimate consumer The reduction in post harvest losses depends on proper use of current technology and further developments derived from a broad spectrum of scientific disciplines Biochemistry plant physiology plant pathology

horticulture agronomy physics engineering and agricultural economics all provide knowledge which has been useful and will be useful in the future for improving post harvest technology and crop preservation This volume records the Proceedings of the NATO Advanced Study Institute on Post Harvest Physiology and Crop Preservation held at Sounion Greece April 28 May 8 1981 Quality Handling and Evaluation Ramdane Dris, S. Mohan Jain, 2007-05-08 Food quality is becoming an ever increasing important feature for consumers and it is well known that some food crops are perishable and have a very short shelf and storage life An effective quality assurance system throughout the handling steps between harvest and retail display is essential to provide a consistently good quality supply of fresh food crops to the consumers and to protect the reputation of a given marketing label Food manufacturing companies all over the world are increasingly focussing on quality aspect of food including minimally processed food to meet consumer demands for fresh like and healthy food products To investigate and control quality one must be able to measure quality related attributes Quality of produce encompasses sensory attributes nutritive values chemical constituents mechanical properties functional properties and defects Successful postharvest handling of crops requires careful coordination and integration of the various steps from harvest operations to consumer level in order to maintain the initial product quality Maturity at harvest is one feature of quality of perishable products it has great influence on their postharvest behavior during marketing Safety assurance can be part of quality assurance and its focus on minimizing chemical and microbial contamination during production harvesting and postharvest handling of intact and fresh cut of commodities Essentially electromagnetic often optical properties relate to appearance mechanical properties to texture and chemical properties to flavor taste and aroma Asian Journal of Agriculture and Development ,2015
