*A Companion to Econometric Analysis of Panel Data* Badi H. Baltagi, 2009-06-22 This book is a companion to Baltagi's 2008 leading graduate econometrics textbook on panel data entitled *Econometric Analysis of Panel Data* 4th Edition The book guides the student of panel data econometrics by solving exercises in a logical and pedagogical manner helping the reader understand learn and apply panel data methods It is also a helpful tool for those who like to learn by solving exercises and running software to replicate empirical studies It works as a complementary study guide to Baltagi 2008 and also as a stand alone book that builds up the reader's confidence in working out difficult exercises in panel data econometrics and applying these methods to empirical work The exercises start by providing some background information on partitioned regressions and the Frisch Waugh Lovell theorem Then it goes through the basic material on fixed and random effects models in a one way and two way error components models basic estimation test of hypotheses and prediction This include maximum likelihood estimation testing for poolability of the data testing for the significance of individual and time effects as well as Hausman's test for correlated effects It also provides extensions of panel data techniques to serial correlation spatial correlation heteroskedasticity seemingly unrelated regressions simultaneous equations dynamic panel models incomplete panels measurement error count panels rotating panels limited dependent variables and non stationary panels

Stata Cross-sectional Time-series Stata Corporation, 2003 *Applied Regression Analysis* Christer

Thrane,2019-10-16 This book is an introduction to regression analysis focusing on the practicalities of doing regression analysis on real life data Contrary to other textbooks on regression this book is based on the idea that you do not necessarily need to know much about statistics and mathematics to get a firm grip on regression and perform it to perfection This non technical point of departure is complemented by practical examples of real life data analysis using statistics software such as Stata R and SPSS Parts 1 and 2 of the book cover the basics such as simple linear regression multiple linear regression how to interpret the output from statistics programs significance testing and the key regression assumptions Part 3 deals with how to practically handle violations of the classical linear regression assumptions regression modeling for categorical y variables and instrumental variable IV regression Part 4 puts the various purposes of or motivations for regression into the wider context of writing a scholarly report and points to some extensions to related statistical techniques This book is written primarily for those who need to do regression analysis in practice and not only to understand how this method works in theory The book s accessible approach is recommended for students from across the social sciences
