Ecosystems as Models for Restoring our Economies, 2nd Edition John H. Giordanengo, 2025-04-01

Emerging from the fields of ecological restoration and economics this interdisciplinary book delivers a clear path to restoring our economies in a way that speaks well to industry groups and business owners students and the general public and to policy makers There are proven relationships between ecology and economics Giordanengo employs those relationships in an intriguing way and integrates them with global case studies to argue that redesigning economic systems according to ecological principles is necessary to balancing critical social environmental and economic goals For example he reveals how more obscure ecological principles and theories succession evolution diversity productivity curves and so on can inform the restructuring of economic systems that are resilient productive and regenerative A variety of students and practitioners have read the first edition or attended John's seminars only to remark Why haven't we learned this in our traditional coursework or This book brings so much clarity to the fields of sustainability and environmental sciences Traditional approaches to sustainability focus on the social environmental and economic pillars of an economy while paying little attention to the foundation those pillars rest upon A comprehensive focus on our economy's foundational components has been ignored for good reason we have lacked an understanding of what they are or how they interact with one another Cross cutting research between ecological and economic systems reveals three foundational components i.e. drivers common to both systems The effective management of these components is perhaps the most important obstacle to resolving current tensions between society nature and the global market economy The scale at which diversity energy and trade must be managed is also justified by self regulating ecosystems such as jungles prairies and pine forests That scale is not global nor is it hyper local The economic and ecological rationale agree that the scale of a sustainable economy the natural geography of humans is regional To the contrary the attempt to manage our economy at a global scale has given rise to chronic social environmental and economic symptoms across earth In highly developed countries such as the United States these symptoms include flat real wages and productivity growth a growing wealth gap degraded environmental conditions rising social unrest and more The closing chapters outline a natural path for restoring our economies illuminated by humanities shared experience in ecological restoration The process of ecosystem recovery following disturbance i.e. succession is one such pathway Unwittingly developed nations such as the United States manage succession to concentrate wealth into fewer hands while lowering the economy's productive capacity net productivity and resistance to future disturbances Economic policies can also move the succession dial toward the productive and diverse center where wealth and resources are recirculated quickly new business opportunities are created and resilience and resistance are fortified a stout shield in the face of global economic turmoil For policymakers consumers and industry groups

this book explores root causes of the challenges you face so that you may take deep correct actions to yield lasting change Giordanengo provides critique but goes further with clear steps that individuals businesses communities and policymakers can take to start restoring our economies now From agricultural restoration to regional manufacturing and energy systems he outlines practical strategies and policy mechanisms for building regenerative economies Students will find not just theoretical and systems knowledge but applied economics ecology and conservation centered around actionable pathways Economic restoration is not only possible it is our humanitarian duty
