

CHAPTER 16:

1. Describe the structure of DNA.

- Double helix of 2 anti parallel strands
- Sugar phosphate backbone on the outside (hydrophilic)
- Nitrogenous bases on the interior (hydrophobic). Purines pair with Pyrimidines.

2. Describe the three models of DNA replication.

- Semi Conservative: Each strand acts as a template for a new strand
- Fully Conservative: An entirely new molecule is synthesised from a DNA template (which remains unaltered)
- Dispersive: New molecules are made of segments of new and old DNA

3. Describe the process of DNA replication, including the role of the origins of replication and replication forks.

- Replication begins at specific sites, origins, where two parental strands separate to form replication bubbles
- Bubbles expand laterally as DNA replication proceeds in both direction; end of bubbles are called replication forks (Y-shaped region)
- Replication bubbles fuse, and synthesis of daughter strands is completed
