Elementary Vector Calculus and Its Applications with MATLAB Programming Nita H. Shah, Jitendra Panchal, 2023-01-31 Sir Isaac Newton one of the greatest scientists and mathematicians of all time introduced the notion of a vector to define the existence of gravitational forces the motion of the planets around the sun and the motion of the moon around the earth Vector calculus is a fundamental scientific tool that allows us to investigate the origins and evolution of space and time as well as the origins of gravity electromagnetism and nuclear forces Vector calculus is an essential language of mathematical physics and plays a vital role in differential geometry and studies related to partial differential equations widely used in physics engineering fluid flow electromagnetic fields and other disciplines Vector calculus represents physical quantities in two or three dimensional space as well as the variations in these quantities The machinery of differential geometry of which vector calculus is a subset is used to understand most of the analytic results in a more general form Many topics in the physical sciences can be mathematically studied using vector calculus techniques This book is designed under the assumption that the readers have no prior knowledge of vector calculus

It begins with an introduction to vectors and scalars and also covers scalar and vector products vector differentiation and integrals Gauss's theorem Stokes's theorem and Green's theorem The MATLAB programming is given in the last chapter This book includes many illustrations solved examples practice examples and multiple choice questions

Linear Algebra and Geometry Igor R. Shafarevich, Alexey O. Remizov, 2012-08-23 This book on linear algebra and geometry is based on a course given by renowned academician I R Shafarevich at Moscow State University The book begins with the theory of linear algebraic equations and the basic elements of matrix theory and continues with vector spaces linear transformations inner product spaces and the theory of affine and projective spaces The book also includes some subjects that are naturally related to linear algebra but are usually not covered in such courses exterior algebras non Euclidean geometry topological properties of projective spaces theory of quadrics in affine and projective spaces decomposition of finite abelian groups and finitely generated periodic modules similar to Jordan normal forms of linear operators Mathematical reasoning theorems and concepts are illustrated with numerous examples from various fields of mathematics including differential equations and differential geometry as well as from mechanics and physics
