Characterization Of Proteins:

Protein Structure Analysis Roza Maria Kamp, Theodora Choli-Papadopoulou, Brigitte Wittmann-Liebold, 1997 Protein Structure Analysis Preparation and Characterization is a compilation of practical approaches to the structural analysis of proteins and peptides Here about 20 authors describe and comment on techniques for sensitive protein purification and analysis These methods are used worldwide in biochemical and biotechnical research currently being carried out in pharmaceutical and biomedical laboratories or protein sequencing facilities The chapters have been written by scientists with extensive experience in these fields and the practical parts are well documented so that the reader should be able to easily reproduce the described techniques The methods compiled in this book were demonstrated in student courses and in the EMBO Practical Course on Microsequence Analysis of Proteins held in Berlin September 10 15 1995 The topics also derived from a FEBS Workshop held in Halkidiki Thessaloniki Greece in April 1995 Most of the authors participated in these courses as lecturers and tutors and made these courses extremely lively and successful Since polypeptides greatly vary depending on their specific structure and function strategies for their structural analysis must for the most part be adapted to each individual protein Therefore advantages and limitations of the experimental approaches are discussed here critically so that the reader becomes familiar with problems that might be encountered

Biophysical Characterization of Proteins in Developing Biopharmaceuticals Damian J. Houde, Steven A. Berkowitz, 2014-09-05 Biophysical Characterization of Proteins in Developing Biopharmaceuticals is concerned with the analysis and characterization of the higher order structure HOS or conformation of protein based drugs Starting from the very basics of protein structure this book takes the reader on a journey on how to best achieve this goal using the key relevant and practical methods commonly employed in the biopharmaceutical industry today as well as up and coming promising methods that are now gaining increasing attention As a general resource guide this book has been written with the intent to help today's industrial scientists working in the biopharmaceutical industry or the scientists of tomorrow who are planning a career in this industry on how to successfully implement these biophysical methodologies In so doing a keen focus is placed on understanding the capability of these methodologies in terms of what information they can deliver Aspects of how to best acquire this biophysical information on these very complex drug molecules while avoiding potential pitfalls in order to make concise well informed productive decisions about their development are key points that are also covered Presents the reader with a clear understanding of the real world issues and challenges in using these methods Highlights the capabilities and limitations of each method Discusses how to best analyze the data generated from these methods Points out what one needs to look for to avoid making faulty conclusions and mistakes In total it provides a check list or road map that empowers the industrial scientists as to what they need to be concerned with in order to effectively do their part in successfully developing these new drugs in an efficient and cost effective manner

Characterization of Proteins Felix Franks, 2007-10-03 Proteins are the

servants of life They occur in all component parts of living organisms and are staggering in their functional variety despite their chemical similarity Even the simplest single cell organism contains a thousand different proteins fulfilling a wide range of life supporting roles Their production is controlled by the cell's genetic machinery and a malfunction of even one protein in the cell will give rise to pathological symptoms Additions to the total number of known proteins are constantly being made on an increasing scale through the discovery of mutant strains or their production by genetic manipulation this latter technology has become known as protein engineering The in vivo functioning of proteins depends critically on the chemical structure of individual peptide chains but also on the detailed folding of the chains themselves and on their assembly into larger supramolecular structures The molecules and their functional assemblies possess a limited in vitro stability Special methods are required for their intact isolation from the source material and for their analysis both qualitatively and quantitatively Proteins are also increasingly used as industrial components e.g. in biosensors and immobilized enzymes because of their specificity selectivity and sensitivity This requires novel and refined processing methods by which the protein isolate can be converted into a form in which it can be utilized

New Methods in Peptide Mapping for the Characterization of Proteins
William S. Hancock, 1995-10-23 This text is devoted to the characterization of recombinant DNA derived proteins by peptide mapping It describes new technological procedures including capillary electrophoresis analysis of glycopeptides and the use of electrospray and matrix assisted laser desorption mass spectrometry The book presents practical procedures for preparing a protein sample the enzyme digestion choice of separation method and procedures for the structural analysis of the separated species Many figures of peptide maps illustrate typical results Tables of summary information about digestion separation conditions and analyses of important protein samples are also presented

Characterization of Protein Therapeutics using Mass Spectrometry
Guodong Chen, 2014-07-08 This book highlights current approaches and future trends in the use of mass spectrometry to characterize protein therapies As one of the most frequently utilized analytical techniques in pharmaceutical research and development mass spectrometry has been widely used in the characterization of protein therapeutics due to its analytical sensitivity selectivity and specificity This book begins with an overview of mass spectrometry techniques as related to the analysis of protein therapeutics structural identification strategies quantitative approaches followed by studies involving characterization of process related protein drug impurities degradants metabolites higher order structures of protein therapeutics Both general practitioners in pharmaceutical research and specialists in analytical sciences will benefit from this book that details step by step approaches and new strategies to solve challenging problems related to protein therapeutics research and development
