2025 The 523 papers presented in these proceedings books were carefully reviewed and selected from 4032 submissions This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications Therefore the theme for this conference was Advanced Intelligent Computing Technology and Applications *Algorithms and Architectures for Parallel Processing* Shadi Ibrahim, Kim-Kwang Raymond Choo, Zheng Yan, Witold Pedrycz, 2017-08-09 This book constitutes the proceedings of the 17th International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2017 held in Helsinki Finland in August 2017 The 25 full papers presented were carefully reviewed and selected from 117 submissions They cover topics such as parallel and distributed architectures software systems and programming models distributed and network based computing big data and its applications parallel and distributed algorithms applications of parallel and distributed computing service dependability and security in distributed and parallel systems service dependability and security in distributed and parallel systems performance modeling and evaluation This volume also includes 41 papers of four workshops namely the 4th International Workshop on Data Text Web and Social Network Mining DTWSM 2017 the 5th International Workshop on Parallelism in Bioinformatics PBio 2017 the First International Workshop on Distributed Autonomous Computing in Smart City DACSC 2017 and the Second International Workshop on Ultrascale Computing for Early Researchers UCER 2017 *Design of FPGA-Based Computing Systems with OpenCL* Hasitha Muthumala Waidyasooriya, Masanori Hariyama, Kunio Uchiyama, 2017-10-24 This book provides wide knowledge about designing FPGA based heterogeneous computing systems using a high level design environment based on OpenCL Open Computing language which is called OpenCL for FPGA The OpenCL based design methodology will be the key technology to exploit the potential of FPGAs in various applications such as low power embedded applications and high performance computing By understanding the OpenCL based design methodology readers can design an entire FPGA based computing system more easily compared to the conventional HDL based design because OpenCL for FPGA takes care of computation on a host data transfer between a host and an FPGA computation on an FPGA with a capable of accessing external DDR memories In the step by step way readers can understand followings how to set up the design environment how to write better codes systematically considering architectural constraints how to design practical applications

Efficient Hardware Acceleration on SoC-FPGA Using OpenCL Susmitha Gogineni, 2017 Field Programmable Gate Arrays FPGAs are taking over the conventional processors in the field of High Performance computing With the advent of FPGA architectures and High level synthesis tools FPGAs can now be easily used to accelerate computationally intensive applications like e g AI and Cognitive computing One of the advantages of raising the level of hardware design abstraction is that multiple configurations with unique properties i e area performance and power can be automatically generated without

the need to re write the input description This is not possible when using traditional low level hardware description languages like VHDL or Verilog This thesis deals with this important topic and accelerates multiple computationally intensive applications amiable to hardware acceleration and proposes a fast heuristic Design Space Exploration method to find dominant design solutions quickly In particular in this work we developed different computationally intensive applications in OpenCL and mapped them onto a heterogeneous SoC FPGA A Genetic Algorithm GA based meta heuristics that does automatic Design Space Exploration DSE on these applications was also developed as GA has shown in the past to lead to good results in multi objective optimization problems like this one The developed explorer automatically inserts a set of control knobs into the OpenCL behavioral description e g to control how to synthesize loops unroll or not and to replicate Compute Units CUs By tuning the these control attributes with possible values thousands of different micro architecture configurations can be obtained Thus an exhaustive search is not feasible and other heuristics are needed Each configuration is compiled using Altera OpenCL SDK tool and executed on Terasic DE1 SoC FPGA board platform to record the corresponding performance and logic utilization In order to measure the quality of the proposed GA based heuristic each application is explored exhaustively taking multiple days to finish for smaller designs to find the dominant optimal solutions Pareto Optimal Designs For complex and larger designs exploring the entire design space exhaustively is not feasible due to very large design space The comparison is quantified by using metrics like Dominance Average Distance from Reference Set ADRS and run time speed up showing that our proposed heuristics lead to very good results at a fraction of the time of the exhaustive search

[A Tutorial on Fpga-Based System Design Using Verilog Hdl](#) Ming-Bo Lin, 2018-08-09 The contents of this book are designed on the basis of the problem based learning PBL approach and follow the paradigm design entry in both schematic and HDL verification as

well as implementation Based on this paradigm we develop an incremental learn by doing method to help the student to build a sound understanding in both the design principles and the implementations of digital systems based on FPGA devices Features of this book include Lab projects are exercised with schematic entry first and then Verilog HDL entry Both functional and timing verification are performed in each entry method to ensure the resulting design can work properly in FPGA devices The incremental learn by doing method is applied to gradually introduce new concepts and hardware resources and increase the depth of lab projects The paradigm design entry in both schematic and HDL verification as well as implementation is employed to familiarize the reader with the right concept and use of the HDL entry method Optional lab projects are provided for readers to make realistic tests on FPGA devices Extended lab projects to broaden the reader's background knowledge and capability This book can be used as the textbook for the following courses Digital Logic Design Practice Introduction to FPGA Based System Design Introduction to Digital System Practice and Introduction to Verilog HDL
