**Experimental Approaches to the Acquisition of Information Structure** Tania L. Leal, Bradley Hoot, Stavros Skopeteas, Joseph V. Casillas, Oksana Laleko, 2025-08-19 Human languages constrain the form utterances can take with constraints on grammaticality being but one example Beyond grammaticality utterances can vary in terms of their infelicity depending on how constituents relate to the surrounding discourse context speakers communicative needs and speakers assessment of the hearers beliefs The study of information structure explores how speakers package their utterances into blocks with varying informational values formalizing these units with notions like focus background or topic These categories among others have been the subject of substantial interest and debate in linguistics generating both theoretical models and experimental studies bearing on how information structure is represented and interpreted in the minds of speakers and how particular information structural categories are encoded in the grammar However the study of how information structure is acquired is still fledgling with uneven coverage across populations and languages Similarly the wide cross linguistic variation in the use of syntactic prosodic and morphological means of its expression has been a major stumbling block in the development of a solid methodological foundation for experimental investigations As things stand the field is ripe for contributions from more varied approaches and drawing on linguistic data from under represented languages and populations

*Parameter Hierarchies and Universal Grammar* Ian Roberts, 2019-06-20 This book develops a minimalist approach to cross linguistic morphosyntactic variation Ian Roberts argues that the essential insight of the principles and parameters approach to variation can be maintained albeit in a somewhat different guise in the context of the minimalist programme for linguistic theory The central idea is to organize the parameters of Universal Grammar UG into hierarchies that define the ways in which properties of individually variant categories and features may act in concert A further leading idea which is consistent with the overall goal of the minimalist programme to reduce the content of UG is that the parameter hierarchies are not directly determined by UG and are instead emergent properties stemming from the interaction of the three factors in language design Cross linguistic variation in word order null subjects incorporation verb movement case alignment wh movement and negation are all analysed in the light of this approach This book represents a significant new contribution to the formal study of cross linguistic morphosyntactic variation on both the empirical and theoretical levels and will appeal to researchers and students in all areas of theoretical linguistics and comparative syntax
