

## Application Note

# AC Coupling Grid Tie Inverters With OutBack Battery-Based Inverters

This application note will show how to add battery storage to a grid-tied (GT) inverter that is limited to photovoltaic (PV) solar conversion only when the utility grid is active. By adding a battery-based (BB) inverter like those from OutBack, the GT inverter stays active without utility power synchronization as the OutBack inverter becomes the new AC source to keep the GT inverter actively converting DC power from the PV array to usable AC power for the site's local electrical loads.

Not only does the AC coupled storage inverter provide backup power during a grid outage when the GT inverter would normally be offline, but it can also provide local ancillary services to reduce the site's utility bill. For example, using the Support mode of an OutBack inverter set to an incoming current limit of 20 amps (A), the inverter will draw the amperage above 20A from the stored energy in the batteries when the load demand exceeds 20A. This has the benefit known as "peak shaving" whereby the peak amp limit is not exceeded and monthly peak demand charges – which in some cases exceeds metered watt hour charges – can reduce utility bills significantly.

Additionally, the OutBack Grid Use Timers can be used to disconnect the inverter loads from the utility grid in an off-grid mode and thereby avoid expensive time-of-use (TOU) surcharges which can be double or triple the normal cents per kilowatt metered rate. TOU surcharges usually occur during the 4-8 PM peak demand period. By going off-grid during this four-hour period, day after day, month after month, significant savings can be achieved.

### Introduction to AC Coupling:

As mentioned previously, by far the most common configuration of a PV generation system is an array of PV modules feeding a GT inverter that converts the DC power to AC power, then fed through the building's service panel and on out to the electrical grid (see Figure 1).

Figure 1 – Typical Grid Tie Inverter Utility Connection

The grid acts like a battery and the renewable energy is placed on the grid for collective consumption. The grid-as-a-battery is a great concept, until it's no longer there – the grid-tied inverter requires the grid to stay powered per the UL1741 requirement for safety reasons. Without grid power to keep the GT inverter operating, the available PV power just sits on the roof unused. And during an outage, a home or business with PV electricity potentially available is in the dark just like everyone else.
