Hartl,2009 *Principles of Genetics* Robert H. Tamarin,1986

Brock Biology of Microorganisms Michael T. Madigan,2009 Three new chapters focus on the rapidly developing fields of archaeal and eukaryotic molecular biology biotechnology and immunology in host defense and disease Page viii **The Matrix of Life** J. C. Collins,1991 Water is the MATRIX OF LIFE within it all life emerged without it no life as we know it is possible In spite of its vital importance as the medium in which all natural molecules first formed no unifying hypotheses have been advanced to explain how water integrates the tremendous variety of complex molecular parts involved In the MATRIX OF LIFE the view is presented for the first time that it is the strong fractal surface patterning properties of saline water that directed natural molecular evolution to spatial forms which satisfy those same basic surface patterns By regulating the degree of order in water on their surfaces natural molecules direct their own assembly to yield the spontaneous self replicative phenomenon we call life More than 120 accurate computer graphic illustrations of molecules as simple as glucose as complex as the ribosome are interpreted in terms of the surface patterning properties of water The work which is the culmination of a 25 year study of natural molecules introduces so many new challenging ideas regarding the role of water in living systems that it should be of great value to everyone interested in the natural sciences *Phytohormones*
