Properties of Matter

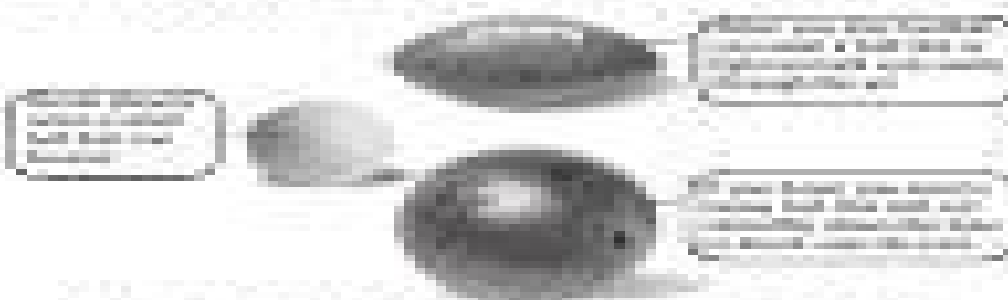

Introduction

Are you able to describe, how these particles are held?

- Why are solids, liquids and gaseous particles held together?
- Why are intermolecular attractive forces stronger in solids?

What Are Physical Properties?

Look at the table in the chapter below to find out the different physical properties of four common substances.

If physical properties of substances are observed without changing the identity of the substance, these are called physical properties. For example, you can identify an object as copper metal, which is shiny, malleable, ductile, and a good conductor of heat and electricity, by its physical properties. The object remains as **it**.

Many of the physical properties of substances listed under the chapter are **intensive**. These properties include density, hardness, refractive index, and the ability to conduct heat and electricity.

Some physical properties depend on the amount of a material you have. In other words, they are **extensive** and a material may have different properties from another amount of the material. Colour, physical appearance, and shape are some basic examples of extensive properties. They change when you make a larger or smaller amount of material. In this part, we will study properties of all types of matter.

LEARNING OBJECTIVES

By the end of this chapter, you should be able to describe the physical properties of solids, liquids and gases, and explain the differences between them.

LEARNING GOALS

By the end of this chapter, you should be able to describe the physical properties of solids, liquids and gases.

LEARNING OBJECTIVES

By the end of this chapter, you should be able to describe the physical properties of solids, liquids and gases.
