

## **Chapter 7: Project Time-Cost Trade-Off**

### **7.1 Introduction**

In the previous chapters, duration of activities discussed as either fixed or random numbers with known characteristics. However, activity durations can often vary depending upon the type and amount of resources that are applied. Assigning more workers to a particular activity will normally result in a shorter duration. Greater speed may result in higher costs and lower quality, however. In this section, we shall consider the impacts of time and cost trade-offs in activities.

Reducing both construction projects' cost and time is critical in today's market-driven economy. This relationship between construction projects' time and cost is called time-cost trade-off decisions, which has been investigated extensively in the construction management literature. Time-cost trade-off decisions are complex and require selection of appropriate construction method for each project task. Time-cost trade-off, in fact, is an important management tool for overcoming one of the critical path method limitations of being unable to bring the project schedule to a specified duration.

### **7.2 Time-Cost Trade-Off**

The objective of the time-cost trade-off analysis is to reduce the original project duration, determined from the critical path analysis, to meet a specific deadline, with the least cost. In addition to that it might be necessary to finish the project in a specific time to:

- Finish the project in a predefined deadline date.
- Recover early delays.
- Avoid liquidated damages.
- Free key resources early for other projects.
- Avoid adverse weather conditions that might affect productivity.
- Receive an early completion-bonus.
- Improve project cash flow

Reducing project duration can be done by adjusting overlaps between activities or by reducing activities' duration. What is the reason for an increase in direct cost as the activity duration is reduced? A simple case arises in the use of overtime work. By scheduling weekend or evening work, the completion time for an activity as measured in calendar days will be reduced. However, extra wages must be paid for such overtime work, so the cost will increase. Also, overtime work is more prone to accidents and quality problems that must be corrected, so costs may increase. The activity duration can be reduced by one of the following actions:

- Applying multiple-shifts work.
- Working extended hours (over time).
- Offering incentive payments to increase the productivity.
- Working on week ends and holidays.
- Using additional resources.

*Research Methods in the Social and Health Sciences* Ted Palys, Chris Atchison, 2021-02-03. *Research Methods in the Social and Health Sciences: Research Decisions* by Ted Palys and Chris Atchison gives students a thorough, thoughtful, and highly readable introduction to the entire research process from start to finish. From its underlying premise that your research questions and objectives rather than any specific method should guide your research, this book discusses each step of the research process from limiting the scope of a literature review to navigating ethical considerations to deciding which methods are best suited for finding answers to specific research questions to how to analyze data and present findings. Readers are encouraged to think deeply about each step of the research process. The book promotes this deliberation by discussing the strengths and limitations of different methods and, throughout the process, the authors provide many examples from their own and student research, sharing insights for research decisions arising from that experience. Readers will develop the skills to create solid research questions, perform literature reviews, identify appropriate data sources and methods, conduct research, analyze and interpret data, and translate the resulting knowledge generated from the research process to a wider audience. All core parts of the research process, by developing their knowledge and creating confidence in their own decision-making skills. After explaining the unique and often complementary strengths of qualitative and quantitative methods, students focus on what methods are best suited for finding answers to the research questions that interest them. Major types of research, including experiments, case studies, surveys, quasi-experiments, ethnographies, focus groups, participatory action research, and archival studies, all receive significant coverage. The text illustrates how these methods are enhanced by integrating them with 21st-century technologies and combining them in mixed-methods projects. Chapters on constructing a research proposal and disseminating research bookend the process with concrete steps in between to support students designing their own original research projects. Study

questions at the end of each chapter encourage students to think critically about the research process and how the choices a researcher makes will broaden or constrain what they can find By the end of the text social and health science students will feel confident in undertaking ethical and thoughtful research
