Characterization And Applications Of Activated Carbon:

Production, Characterization, and Applications of Activated Carbon Eric Paul Leimkuehler, 2010 This thesis investigates the production of activated carbon an environmentally friendly adsorbent which is used in many industries Activated carbon can be derived from many different sources and produced in varying production processes The raw materials used activation process and process parameters determine the physical properties and performance characteristics of the resulting carbon Modifying these activation properties determines the porosity and pore volume distribution in the carbon In preparation for commercial production detailed mass balances are needed to quantify yield quantify the masses of waste streams understand the propensity to recycle the KOH and to provide a benchmark for further optimization A mass balance on the reaction of phosphoric acid and KOH with carbon is provided Additionally analyzing carbons can be expensive and time consuming making it important to identify physical properties which indicate that a carbon may have favorable performance characteristics The following paper proposes three ways of screening carbons observing the mass loss in the chemical activation process measuring the density of the carbon and testing the methane uptake of the carbon in a rapid uptake fixture Carbons made from different precursors reacted with different activating agents and heated at different process temperatures for different process hold times were analyzed

Porosity in Carbons John W. Patrick, 1995-01-06 Porosity in carbons often means different things to different people depending largely on the different applications of the various carbon materials On the one hand users involved in gas purification or respiratory protection are concerned primarily with microporosity and at the other extreme the user of carbon in the form of metallurgical coke is concerned with macroporosity because of its influence on the mechanical properties of the coke Between these extremes there is a range of applications which rely on different aspects of the nature of the porous structure and the characterization required reflects the particular application in mind This characterization of a wide diversity of porous structures presents some problems However recent developments have produced some solutions for example computerized image analysis has facilitated the measurement of pore shape and size The eleven chapters in this book present an analysis of the current methods of characterization and the role of various aspects of carbon porosity in some representative and diverse applications

Activated Carbon Harry Marsh, Francisco Rodríguez Reinoso, 2006-07-12 Recent years have seen an expansion in speciality uses of activated carbons including medicine filtration and the purification of liquids and gaseous media Much of current research and information surrounding the nature and use of activated carbon is scattered throughout various literature which has created the need for an up to date comprehensive and integrated review reference In this book special attention is paid to porosities in all forms of carbon and to the modern day materials which use activated carbons including fibres clothes felts and monoliths In addition the use of activated carbon in its granular and powder forms to facilitate usage in liquid and gaseous media is explored Activated Carbon will make essential reading for Material Scientists Chemists and Engineers in academia and
