The Spatial Scale of Crime John R. Hipp, 2022-12-09 Combining insights from two distinct research traditions the communities and crime tradition that focuses on why some neighborhoods have more crime than others and the burgeoning crime and place literature that focuses on crime in micro geographic units this book explores the spatial scale of crime Criminologist John Hipp articulates a new theoretical perspective that provides an individual and household level theory to underpin existing ecological models of neighborhoods and crime A focus is maintained on the agents of change within neighborhoods and communities and how households nested in neighborhoods might come to perceive problems in the neighborhood and then have a choice of exit voice loyalty or neglect EVLN A characteristic of many crime incidents is that they happen at a particular spatial location and a point in time These two simple insights suggest the need for both a spatial and a longitudinal perspective in studying crime events The spatial question focuses on why crime seems to occur more frequently in some locations than others and the consequences of this for certain areas of cities or neighborhoods The longitudinal component focuses on how crime impacts and is impacted by characteristics of the environment This book looks at where offenders targets and guardians might live and where they might spatially travel throughout the environment exploring how vibrant neighborhoods are generated how neighborhoods change and what determines why some neighborhoods decline over time while others avoid this fate Hipp s theoretical model provides a cohesive response to the general question of the spatial scale of crime and articulates necessary future directions for the field This book is essential for students and scholars interested in spatial temporal criminology *Learning about Livelihoods*, 2002 Videocassette summary Drawn from Lesotho Mozambique South Africa Zambia and Zimbabwe these films reflect the impacts of retrenchment flood risk recurrent drought HIV AIDS violence and political instability on individual households and their communities **Fresh Perspectives: Managing People**, 2007 Statistical Genetics Prem Narain (Prof.), 1990 This Book Describes The Methodology Of A Field Of Biology That Weds Statistics And Genetics And Goes By The Name Of Statistical Genetics The Relevant Principles Of Genetics Statistics And Breeding Are Discussed Together At One Place The Emphasis Is On The Important Applications Of The Statisticogenetic Principles To The Plant And Animal Breeding Problems It Has Been Written For The Benefit Of Post Graduate Students Majoring In The Fields Of Either Genetics And Breeding Or Statistics Applied To Agriculture Also Since Advanced Researches In This Field Which Have Taken Place Over The Years Are Scattered In Various Journals This Book Is Equally Addressed To Researchers In The Fields Of Statistics Genetics And Breeding The Book Is Unique In Several Respects And Sets Itself Apart When Compared With Other Published Books On The Subject The Basic Elements Of Mendelian Genetics Which Is Very Crucial To The Understanding Of The Subject Have Been Included Right In The Beginning The Relevant Topics Of Population Genetics Essential For Understanding The Principles Of Quantitative Inheritance Have Also Been Dealt With Special Treatment Has Been Given To The Topics Dealing With The

Estimation of Genetic Parameters Under Optimal and Suboptimal Environments for Body Weight in Chicken Using a Diallel Mating System

Mohamed Hanafi Sayed Mahmoud,1966 A 2 x 2 x 2N confounded diallel mating design 2 series 2 males N females per male per series was used to obtain estimates of the genetic parameters in body weight traits in a noninbred population of New Hampshire chickens grown on 18% and 24% protein rations Individual selection also was applied to evaluate the reliability of the genetic parameters obtained under each protein level The analysis showed an extremely large contribution of series effects to the total variation in the traits which was attributed to the environmental influences from one series to the other and to the maternal environment The component of variance due to series x male interaction was found to be small or zero under the 24% protein ration An optimal environment may have given certain genotypes a greater opportunity to adapt to the environment The higher estimates of the component of variance of series x female interaction for one day body weight suggests the influence of maternal effects from one series to the other and from one dam to the other Generally estimates for

the component of variance of male effects were higher under the 18% protein ration than under the 24% protein ration Conversely the component of variance of female effects showed higher values under the 24% protein ration than under 18% protein ration for most of the traits considered **Man and Environment** Surajit Sinha,Arabinda Basu,Amitabha Basu,1989

The Effect of Public Transit on Social Opportunities for Ethnic Minority

Populations Talia M. McCray,Myung Kyung Chung,Ana Julita Gomez Sanchez,2010 Travel time to destinations in the Austin area continues to rise during both peak and off peak hours With increased congestion and higher gas prices some individuals are traveling more selectively and viewing public transit as a cost saving alternative to the automobile However a substantial number of Austinites remain solely dependent on their automobiles for transportation This study analyzes the travel patterns of students attending Huston Tillotson University HT an Historical Black College and University HBCU This population does not utilize public transit and is mostly car dependent Reasons given include the need to be independent the inefficiency of Capital Metropolitan Transportation Authority bus travel time and routes condition of bus stops and the fear of crime while waiting for a bus During the Spring of 2009 focus groups were held on HT s campus and surveys were distributed to the broader student body From September 2009 May 2010 an environmental analysis of the built environment surrounding 38 bus stops in three locations was performed using an established survey tool The researchers determined that both studies were necessary to test whether an environmental analysis would support the findings of the focus groups and student surveys Using GIS a cluster analysis of bus stop environments and cumulative distribution functions to explore bus travel time to reported destinations the researchers found that the students perceptions were not always consistent with the environmental analysis The cluster analysis revealed spatial differences when identifying negative attributes However none of the bus stop structures in the three areas were in very poor condition The researchers suggest that a transit training program for HT students would be beneficial in improving ridership Population, Environment, and Development R.
