Mathews, 2005-01-01 Most of the classic DOE books were written before DOE software was generally available so the technical level that they assumed was that of the engineer or scientist who had to write his or her own analysis software In this practical introduction to DOE guided by the capabilities of the common software packages Paul Mathews presents the basic types and methods of designed experiments appropriate for engineers scientists quality engineers and Six Sigma Black Belts and Master Black Belts Although instructions in the use of MINITAB are detailed enough to provide effective guidance to a new MINITAB user the book is still general enough to be very helpful to users of other DOE software packages Every chapter contains many examples with detailed solutions including extensive output from MINITAB Preview a sample chapter from this book along with the full table of contents by clicking here You will need Adobe Acrobat to view this pdf file

Introduction to Design and Analysis of Experiments George W. Cobb, 1998-03-09 An applied introduction to statistics for students with no background in the subject The author places a strong emphasis on choosing sound design structures prior to a formal discussion of ANOVA and then goes on to explore real data sets using a variety of graphs and numerical methods before testing the assumptions behind standard ANOVA texts Throughout the book the author emphasises the contextual understanding and interpretation of data analysis rather than stressing formal deductive mathematical reasoning while the more difficult algebraic discussions are contained in optional sections
