Mind, Matter and Quantum Mechanics Henry P. Stapp, 2013-04-17

Scientists other than quantum physicists often fail to comprehend the enormity of the conceptual change wrought by quantum theory in our basic conception of the nature of matter writes Henry Stapp Stapp is a leading quantum physicist who has given particularly careful thought to the implications of the theory that lies at the heart of modern physics In this book which contains several of his key papers as well as new material he focuses on the problem of consciousness and explains how quantum mechanics allows causally effective conscious thought to be combined in a natural way with the physical brain made of neurons and atoms The book is divided into four sections The first consists of an extended introduction Key foundational and somewhat more technical papers are included in the second part together with a clear exposition of the orthodox interpretation of quantum mechanics The third part addresses in a non technical fashion the implications of the theory for some of the most profound questions that mankind has contemplated How does the world come to be just what it is and not something else How should humans view themselves in a quantum universe What will be the impact on society of the revised scientific image of the nature of man The final part contains a mathematical appendix for the specialist and a glossary of important terms and ideas for the interested layman This new edition has been updated and extended to address recent debates about consciousness

Fundamentals of Modern Physics Robert Eisberg,1990-11-12

Quantum

Mechanics and Gravity Mendel Sachs,2013-06-29 Theoretical physics is presently at a very exciting time in the history of scientific discovery For we are at a precipice facing two conflicting 20th century revolutionary movements in physics each purporting to be basic truths of nature the quantum theory and the theory of relativity In the 20th century the mathematical expression of the quantum theory yielded correct predictions of a great deal of the data on the behavior of the molecular atomic nuclear and elementary particle domains of matter In the same period the theory of relativity successfully described new features of material systems In special relativity the relativistic Doppler effects transverse and longitudinal of electromagnetic radiation and the mechanics of matter that moves at speeds close to the speed of light revealing for example the energy mass relation $E = mc^2$ revolutionized our thinking In its form of general relativity it has yielded a formalism that successfully predicted features of the phenomenon of gravity also predicted by the classical Newtonian theory but in addition features not predicted by the classical theory thereby superseding Newton's theory of universal gravitation The problem we are now faced with in these early decades of the 21st century is that in their precise mathematical forms and their conceptual bases the theory of relativity and the quantum theory are both logically and mathematically incompatible
