Networks: An Introduction Mark Newman, 2010-03-25 The scientific study of networks including computer networks social networks and biological networks has received an enormous amount of interest in the last few years The rise of the Internet and the wide availability of inexpensive computers have made it possible to gather and analyze network data on a large scale and the development of a variety of new theoretical tools has allowed us to extract new knowledge from many different kinds of networks The study of networks is broadly interdisciplinary and important developments have occurred in many fields including mathematics physics computer and information sciences biology and the social sciences This book brings together for the first time the most important breakthroughs in each of these fields and presents them in a coherent fashion highlighting the strong interconnections between work in different areas Subjects covered include the measurement and structure of networks in many branches of science methods for analyzing network data including methods developed in physics statistics and sociology the fundamentals of graph theory computer algorithms and spectral methods mathematical models of networks including random graph models and generative models and theories of dynamical processes taking place on networks

Networks, 2009 In the last 20 years interest in network phenomena has grown immensely among anthropologists psychologists political scientists economists and lawyers Empirical observation shows that network arrangements can be found in many branches of business This is often linked to rapid changes in today's markets and technologies but it is not the only reason Legal institutions have been at the centre of private law since the industrial revolution but today contracts and corporations cannot cope with the risks and opportunities posed by networks Legal practice needs solutions which go beyond the classical traditions of thinking in the dichotomy of contract and corporation This volume is the outcome of a conference held in Fribourg Switzerland which focused on the legal treatment of contractual networks in particular questions of network expectations the fragility of network institutions and the question of how law can minimise network specific risks towards third parties The contributors among them many of the world's leading scholars in this field include Roger Brownsword Simon Deakin Gunther Teubner Hugh Collins and Marc Amstutz The book will be of interest to scholars of contract corporate law and legal theory

The Structure and Dynamics of Networks Mark Newman, Albert-László Barabási, Duncan J. Watts, 2011-10-23 From the Internet to networks of friendship disease transmission and even terrorism the concept and the reality of networks has come to pervade modern society But what exactly is a network What different types of networks are there Why are they interesting and what can they tell us In recent years scientists from a range of fields including mathematics physics computer science sociology and biology have been pursuing these questions and building a new science of networks This book brings together for the first time a set of seminal articles representing research from across these disciplines It is an ideal sourcebook for the key research in this fast growing field The book is organized into four sections each preceded by an editors introduction summarizing its contents and general theme The first section sets the stage by discussing some of the historical antecedents of contemporary research in the area From there the book moves to the empirical side of the science of networks before turning to the foundational modeling ideas that have been the focus of much subsequent activity The book closes by taking the reader to the cutting edge of network science the relationship between network structure and system dynamics From network robustness to the spread of disease this section offers a potpourri of topics on this rapidly expanding frontier of the new science
