Abiotic Selection in Earth Surface Systems Jonathan D. Phillips, 2025-07-22 This book is about abiotic selection in Earth surface systems It demonstrates that seemingly purposeful or goal oriented phenomena in Earth s processes actually emerge from selection dynamics While many think of selection in the context of biological evolution it extends to abiotic processes crucial in understanding Earth s function and evolution The author delineates four forms of geophysical selection gradient resistance network and thermodynamic These selections manifest in various natural systems from fluid flows shaping landscapes to the efficient transport of mass and energy The book acknowledges the interplay of geophysical and ecological processes employing them as pedagogical tools Structured with an introduction to abiotic selection and its context the book delves into the application of key principles such as thermodynamics and flow dynamics to Earth surface systems Each subsequent chapter examines one of the four types of selection featuring diverse real world examples from climate dynamics to oceanography Geared toward researchers graduate students and practitioners in fields such as geophysics geology geography hydrology and ecosystem sciences it also appeals to those interested in evolutionary thinking beyond traditional life sciences
