Statistics Catalog 2005 Neil Thomson, 2004-09 *Hybrid Systems: Computation and Control* Nancy Lynch, Bruce Krogh, 2007-10-28 This book constitutes the refereed proceedings of the Third International Workshop on Hybrid Systems Computation and Control HSCC 2000 held in Pittsburgh PA USA in March 2000 The 32 revised full papers presented together with abstracts of four invited talks were carefully reviewed and selected from a total of 71 papers submitted The focus of the works presented is on modeling control synthesis design and verification of hybrid systems Among the application areas covered are control of electromechanical systems air traffic control control of automated freeways and chemical process control **Lyapunov Exponents** Ludwig Arnold, Hans Crauel, Jean-Pierre Eckmann, 2006-11-14 Since the predecessor to this volume LNM 1186 Eds L Arnold V Wihstutz appeared in 1986 significant progress has been made in the theory and applications of Lyapunov exponents one of the key concepts of dynamical systems and in particular pronounced shifts towards nonlinear and infinite dimensional systems and engineering applications are observable This volume opens with an introductory survey article Arnold Crauel followed by 26 original fully refereed research papers some of which have in part survey character From the Contents L Arnold H Crauel Random Dynamical Systems I Ya Goldscheid Lyapunov exponents and asymptotic behaviour of the product of random matrices Y Peres Analytic dependence of Lyapunov exponents on transition probabilities O Knill The upper Lyapunov exponent of $S^1 \times \mathbb{R}$ cocycles Discontinuity and the problem of positivity Yu D Latushkin A M Stepin Linear skew product flows and semigroups of weighted composition operators P Baxendale Invariant measures for nonlinear stochastic differential equations Y Kifer Large deviations for random expanding maps P Thieullen Generalisation du theoreme de Pesin pour l'entropie S T Ariaratnam W C Xie Lyapunov exponents in stochastic structural mechanics F Colonius W Kliemann Lyapunov exponents of control flows Self-similar and Self-affine Sets and Measures Balázs Bárány, Károly Simon, Boris Solomyak, 2023-11-16 Although there is no precise definition of a fractal it is usually understood to be a set whose smaller parts when magnified resemble the whole Self similar and self affine sets are those for which this resemblance is precise and given by a contracting similitude or affine transformation The present book is devoted to this most basic class of fractal objects The book contains both introductory material for beginners and more advanced topics which continue to be the focus of active research Among the latter are self similar sets and measures with overlaps including the much studied infinite Bernoulli convolutions Self affine systems pose additional challenges their study is often based on ergodic theory and dynamical systems methods In the last twenty years there have been many breakthroughs in these fields and our aim is to give introduction to some of them often in the simplest nontrivial cases The book is intended for a wide audience of mathematicians interested in fractal geometry including students Parts of the book can be used for graduate and even advanced undergraduate courses American Book Publishing Record ,2004 *Journal of the American Statistical Association* ,2008 Proceedings ,1999 **MILCOM 1999** IEEE Communications Society, 1999

An Asymptotic Formula for the Probability of a Typical Type Xiaohai Zhang, 1997

The Theory of Hash Functions and Random Oracles Arno Mittelbach, Marc Fischlin, 2021-01-19 Hash functions are the cryptographer's Swiss Army knife. Even though they play an integral part in today's cryptography, existing textbooks discuss hash functions only in passing and instead often put an emphasis on other primitives like encryption schemes. In this book, the authors take a different approach and place hash functions at the center. The result is not only an introduction to the theory of hash functions and the random oracle model but a comprehensive introduction to modern cryptography. After motivating their unique approach in the first chapter, the authors introduce the concepts from computability theory, probability theory, information theory, complexity theory, and information theoretic security that are required to understand the book's content. In Part I, they introduce the foundations of hash functions and modern cryptography. They cover a number of schemes, concepts, and proof techniques, including computational security, one-way functions, pseudorandomness, and pseudorandom functions, game-based proofs, message authentication codes, encryption schemes, signature schemes, and collision-resistant hash functions. In Part II, the authors explain the random oracle model, proof techniques used with random oracles, random oracle constructions, and examples of real-world random oracle schemes. They also address the limitations of random oracles and the random oracle controversy: the fact that uninstantiable schemes exist which are provably secure in the random oracle model but which become insecure with any real-world hash function. Finally, in Part III, the authors focus on constructions of hash functions. This includes a treatment of iterative hash functions and generic attacks against hash functions, constructions of hash functions based on block ciphers and number-theoretic assumptions, a discussion of privately keyed hash functions including a full security proof for HMAC, and a presentation of real-world hash functions. The text is supported with exercises, notes, references, and pointers to further reading, and it is a suitable textbook for undergraduate and graduate students and researchers of cryptology and information security.

Arithmetic Geometry, Number Theory, and Computation Jennifer S. Balakrishnan, Noam Elkies, Brendan Hassett, Bjorn Poonen, Andrew V. Sutherland, John Voight, 2022-03-15 This volume contains articles related to the work of the Simons Collaboration Arithmetic Geometry, Number Theory, and Computation. The papers present mathematical results and algorithms necessary for the development of large-scale databases like the L-functions and Modular Forms Database (LMFDB). The authors aim to develop systematic tools for analyzing Diophantine

properties of curves surfaces and abelian varieties over number fields and finite fields The articles also explore examples important for future research Specific topics include algebraic varieties over finite fields the Chabauty Coleman method modular forms rational points on curves of small genus S unit equations and integral points
