**Objectives:**

- To investigate the relationship between the amount of rainfall and the variation of temperature and the effect on the distribution of biomes globally.
- To create and analyze climatograms.
- To make predictions about the distribution of a biome via altitude and latitude.

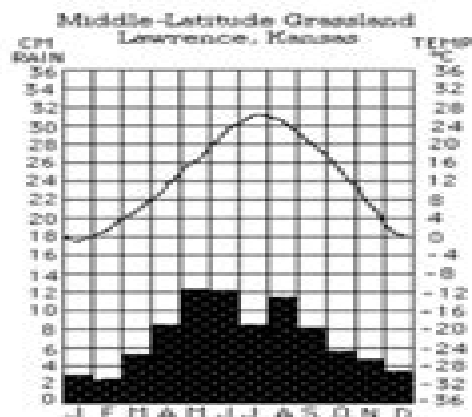

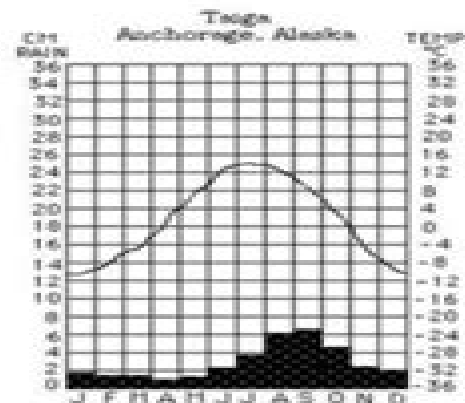

**Introduction:**

Climatograms are grids on which averages of precipitation and temperature at a particular location are plotted. Climatograms show variations in only two important climatic factors during a year. Other factors may greatly affect climate, but a climatogram does give a rough idea of climate in the location from which the data were obtained. frequent reference to the description of biomes in the text, it can help you understand the biological relationships that make up the diversity of the biotic communities found on land.

**Part 1**

Review the following six example climatograms.

Precipitation is on the LEFT side of the graph and is represented by the BAR graph.  
Temperature is on the RIGHT side of the graph and is represented by the LINE graph.
