Weighted Polynomial Approximation and Numerical Methods for Integral Equations

Peter Junghanns, Giuseppe Mastroianni, Incoronata Notarangelo, 2021-08-10
The book presents a combination of two topics one coming from the theory of approximation of functions and integrals by interpolation and quadrature respectively and the other from the numerical analysis of operator equations in particular of integral and related equations The text focusses on interpolation and quadrature processes for functions defined on bounded and unbounded intervals and having certain singularities at the endpoints of the interval as well as on numerical methods for Fredholm integral equations of first and second kind with smooth and weakly singular kernel functions linear and nonlinear Cauchy singular integral equations and hypersingular integral equations The book includes both classic and very recent results and will appeal to graduate students and researchers who want to learn about the approximation of functions and the numerical solution of operator equations in particular integral equations

Asymptotic Stability of Steady Compressible Fluids Mariarosaria Padula, 2011-07-30

This volume introduces a systematic approach to the solution of some mathematical problems that arise in the study of the hyperbolic parabolic systems of equations that govern the motions of thermodynamic fluids It is intended for a wide audience of theoretical and applied mathematicians with an interest in compressible flow capillarity theory and control theory The focus is particularly on recent results concerning nonlinear asymptotic stability which are independent of assumptions about the smallness of the initial data Of particular interest is the loss of control that sometimes results when steady flows of compressible fluids are upset by large disturbances The main ideas are illustrated in the context of three different physical problems i A barotropic viscous gas in a fixed domain with compact boundary The domain may be either an exterior domain or a bounded domain and the boundary may be either impermeable or porous ii An isothermal viscous gas in a domain with free boundaries iii A heat conducting viscous polytropic gas
