Mode-Locked Semiconductor Lasers Lina Jaurigue, 2017-06-22 This thesis investigates the dynamics of passively mode locked semiconductor lasers with a focus on the influence of optical feedback on the noise characteristics The results presented

here are important for improving the performance of passively mode locked semiconductor lasers and at the same time are relevant for understanding delay systems in general The semi analytic results developed are applicable to a broad range of oscillatory systems with time delayed feedback making the thesis of relevance to various scientific communities Passively mode locked lasers can produce pulse trains and have applications in the contexts of optical clocking microscopy and optical data communication among others Using a system of delay differential equations to model these devices a combination of numerical and semi analytic methods is developed and used to characterize this system [Encyclopedia of Special Functions: The Askey-Bateman Project: Volume 2, Multivariable Special Functions](#) Tom H.
