

Chapter 12 DNA and RNA

Section 12-1 DNA (pages 287-294)

This section tells about the experiments that helped scientists discover the relationship between genes and DNA. It also describes the chemical structure of the DNA molecule.

Griffith and Transformation (pages 287-289)

1. What did Frederick Griffith want to learn about bacteria? _____

2. The strain of bacteria that caused pneumonia grew into _____ colonies on culture plates; harmless bacteria produced colonies with _____ edges.
3. Circle the letter of each sentence that is true about Griffith's experiment.
 - a. Mice injected with bacteria from smooth colonies died.
 - b. Mice injected with bacteria from rough colonies died.
 - c. Mice injected with heat-killed bacteria from smooth colonies died.
 - d. Mice injected with a mixture of bacteria from heat-killed smooth colonies and live rough colonies died.
4. What result from Griffith's experiment suggested that the cause of pneumonia was not a chemical poison released by the disease-causing bacteria? _____

5. What is transformation? _____

6. What hypothesis did Griffith form from the results of his experiments? _____

Avery and DNA (page 289)

7. Is the following sentence true or false? Avery and his colleagues thought that the molecule required in transformation might also be the molecule of the gene.

8. Briefly describe how Avery and his group determined which molecule was most important for transformation? _____

Theoretical and Computational Photochemistry García Iriepa Cristina, Marco Marazzi, 2023-04-21 Theoretical and Computational Photochemistry Fundamentals Methods Applications and Synergy with Experimental Approaches provides a comprehensive overview of photoactive systems and photochemical processes After an introduction to photochemistry the book discusses the key computational chemistry methods applied to the study of light induced processes over the past decade and further outlines recent research topics to which these methods have been applied By discussing the synergy between experimental and computational data the book highlights how theoretical studies could facilitate understanding experimental findings This helpful guide is for both theoretical chemists and experimental photochemistry researchers interested in utilizing computational photochemistry methods for their own work Reviews the fundamentals of photochemistry helping those new to the field in understanding key concepts Provides detailed guidance and comparison of computational and theoretical methods highlighting the suitability of each method for different case studies Outlines current applications to encourage discussion of the synergy between experimental and computational data and inspiring further application of these methods to other photochemical processes

A First Course in Systems Biology Eberhard Voit, 2017-09-05 A First Course in Systems Biology is an introduction for advanced undergraduate and graduate students to the growing field of systems biology Its main focus is the development of computational models and their applications to diverse biological systems The book begins with the fundamentals of modeling then reviews features of the molecular inventories that bring biological systems to life and discusses case studies that represent some of the frontiers in systems biology and synthetic biology In this way it provides the reader with a comprehensive background and access to methods for executing standard systems biology tasks understanding the modern literature and launching into specialized courses or projects that address biological questions using theoretical and computational means New topics in this edition include default modules for model design limit cycles and chaos parameter estimation in Excel model representations of gene regulation through transcription factors derivation of the Michaelis Menten rate law from the original conceptual model different types of inhibition hysteresis a model of differentiation system adaptation to persistent signals nonlinear nullclines PBPK models and elementary modes The format is a combination of instructional text and references to primary literature complemented by sets of small scale exercises that enable hands on experience and large scale often open ended questions for further reflection
