

Chapter 23 “Touring Our Solar System”

23.1 - The Solar System

- The sun is the hub of a huge rotating system of planets, their satellites, and numerous smaller celestial (sky) bodies
- About 99.85% of the mass of our solar system is contained within the sun. The other 0.15% is mostly made up by the planets
- What are the order of the planets (closest to sun → farthest to sun):
- Mercury → Venus → Earth → Mars → Jupiter → Saturn → Uranus → Neptune

- The planets are held by the sun's gravitational force, each planet moves in an elliptical orbit, and all travel in the same direction
- The nearest planet to the sun (mercury) has the fastest orbital motion at 48 km/sec and it has the shortest period of revolution
- The farthest planet to the sun (neptune) has an orbital speed of 5km/sec and it requires 165 Earth years to complete one revolution

The Planets: An Overview

- Terrestrial planets
 - Mercury, Venus, Earth, and Mars
 - Relatively small and rocky
 - They are Earth-like planets
 - They are called the inner planets because they are the closest to the sun
- Jovian planets
 - Jupiter, Saturn, Uranus, and Neptune
 - Huge gas giants
 - They are Jupiter-like planets
 - Often called giants

Studying Virtual Math Teams Gerry Stahl, 2010-05-03 Studying Virtual Math Teams centers on detailed empirical studies of how students in small online groups make sense of math issues and how they solve problems by making meaning together These studies are woven together with materials that describe the online environment and pedagogical orientation as well as reflections on the theoretical implications of the findings in the studies The nature of group cognition and shared meaning making in collaborative learning is a foundational research issue in CSCL More generally the theme of sense making is a central topic in information science While many authors allude to these topics few have provided this kind of detailed analysis of the mechanisms of intersubjective meaning making This book presents a coherent research agenda that has been pursued by the author and his research group The book opens with descriptions of the project and its methodology as well as situating this research in the past and present context of the CSCL research field The core research team then presents five concrete analyses of group interactions in different phases of the Virtual Math Teams research project These chapters are followed by several studies by international collaborators discussing the group discourse the software affordances and alternative representations of the interaction all using data from the VMT project The concluding chapters address implications for the theory of group cognition and for the methodology of the learning sciences In addition to substantial introductory and concluding chapters this important new book includes analyses based upon the author's previous research thereby providing smooth continuity and an engaging flow that follows the progression of the research The VMT project has dual goals a to provide a source of experience and data for practical and theoretical explorations of group knowledge building and b to develop an effective online environment and educational service for collaborative learning of mathematics Studying Virtual Math Teams reflects these twin orientations reviewing the intertwined aims and development of a rigorous science of small group cognition and a Web 2.0 educational math service It documents the kinds of interactional methods that small groups use to explore math issues and provides a glimpse into the potential of online interaction to promote productive math discourse
