Function Spaces, Theory and Applications Ilia Binder, Damir Kinzbulatov, Javad Mashreghi, 2023-12-11 The focus program on Analytic Function Spaces and their Applications took place at Fields Institute from July 1st to December 31st 2021 Hilbert spaces of analytic functions form one of the pillars of complex analysis These spaces have a rich structure and for more than a century have been studied by many prominent mathematicians They also have several essential applications in other fields of mathematics and engineering e g robust control engineering signal and image processing and theory of communication The most important Hilbert space of analytic functions is the Hardy class H^2 However its close cousins e g the Bergman space A_2 the Dirichlet space D the model subspaces K_t and the de Branges Rovnyak spaces H^b have also been the center of attention in the past two decades Studying the Hilbert spaces of analytic functions and the operators acting on them as well as their applications in other parts of mathematics or engineering were the main subjects of this program During the program the world leading experts on function spaces gathered and discussed the new achievements and future venues of research on analytic function spaces their operators and their applications in other domains With more than 250 hours of lectures by prominent mathematicians a wide variety of topics were covered More explicitly there were mini courses and workshops on Hardy Spaces Dirichlet Spaces Bergman Spaces Model Spaces Interpolation and Sampling Riesz Bases Frames and Signal Processing Bounded Mean Oscillation de Branges Rovnyak Spaces Operators on Function Spaces Truncated Toeplitz Operators Blaschke Products and Inner Functions Discrete and Continuous Semigroups of Composition Operators The Corona Problem Non commutative Function Theory Drury Arveson Space and Convergence of Scattering Data and Non linear Fourier Transform At the end of each week there was a high profile colloquium talk on the current topic The program also contained two semester long advanced courses on Schramm Loewner Evolution and Lattice Models and Reproducing Kernel Hilbert Space of Analytic Functions The current volume features a more detailed version of some of the talks presented during the program

Approximation Theory and Applications Piecewise Linear and Generalized Functions presents the main provisions of approximation theory and considers existing and new methods for approximating piecewise linear and generalized functions widely used to solve problems related to mathematical modeling of systems processes and phenomena in fields ranging from engineering to economics The widespread use of piecewise linear and generalized functions is explained by the simplicity of their structure However challenges often arise when constructing solutions over the entire domain of these functions requiring the use special mathematical methods to put theory into practice This book first offers a first full foundation in approximation theory as it relates to piecewise linear and generalized functions followed by staged methods to resolve common problems in practice with applications examined across structural mechanics medicine quantum theory signal theory semiconductor theory mechanical engineering heat engineering and other fields Later chapters consider numerical verification of approximation methods and approximation theory as the basis for new macroeconomic theory with impulse

and jump characteristics Each chapter includes questions for review and sample problems accompanied by a separate Solutions Manual hosted for instructor access Offers clear comprehensive coverage of approximation theory and applications with full consideration for newly evolved implications of piecewise linear and generalized functions Features practical examples across structural mechanics medicine quantum theory signal theory semiconductor theory mechanical engineering and heat engineering among other fields Includes questions for review sample problems and a separate Solutions Manual hosted for instructor access Considers numerical verification of approximation methods *The Aeronautical Journal* ,1921
