The book comprises three parts: Green Communications, Green Computing, and Smart Grid and Applications. Part I, Green Communications, deals with energy efficient architectures and associated performance measures in wireless communications. It covers energy issues in PHY, MAC, Routing, Application layers, and their solutions for a variety of networks. Part II, Green Computing, deals with various energy issues in data centers, computing clusters, computing storage, and associated optimization techniques. Energy management strategies are presented to balance between energy efficiency and required qualities of services.
