E. Glenny,AERONAUTICAL RESEARCH LABS MELBOURNE (Australia),1982 Two manual inflight engine performance

monitoring procedures for use on turboprop engines have been devised The first method which involves relatively complex data reduction is applicable in its present form only to the Rolls Royce Dart engine The second method requiring only simple arithmetic calculations may be used on any multi engined aircraft The basic principles and operating procedures for both methods are described Analysis of inflight engine performance data for the Dart has shown that even though consistent results in terms of performance trends can be produced the computational equipment and procedures required to derive the appropriate trend graphs are excessive and are considered not to be warranted or cost effective at present With the second method an analysis of trial data obtained from the Hercules C130 T56 aircraft has shown that effective engine performance monitoring trend plots may be obtained for both torque and fuel flow deviations The simple data reduction procedures involved allow the relevant analyses to be carried out in flight by a flight engineer or suitable qualified person thus giving immediate engine trend information for use by aircrew and maintenance personnel on a day to day basis Author Flight International ,1996

Pushing the Envelope Donald M. Pattillo,1998 Pushing the Envelope a survey history of the American aircraft now aerospace manufacturing industry is the most comprehensive history on the subject ever completed Though it covers the development of the industry from the beginnings of flight to the present it provides far more than a simple chronology by analyzing key economic military technical and international influences on the industry and showing how the industry has been instrumental in American military and technological leadership from its modest beginnings Using original sources whenever available Pushing the Envelope focuses on the business of aircraft It is neither an aeronautical nor a production history of the industry although both aspects are addressed Instead Donald M Pattillo features the development and production of aircraft in different periods in the context of aeronautical progress Pushing the Envelope also establishes that the central fact of the industry s existence its dependence on military contracts has been simultaneously its greatest strength and greatest vulnerability Even during periods of military expansion Pattillo illustrates it has always been an unstable and insecure enterprise Carefully researched Pushing the Envelope also assesses the environmental impacts on the industry including those pressures that have often led it into ethical dispute Unlike any other technological industry the unique qualities of the aircraft industry are truly paradoxical although it provides vital technical and production capability to the nation demand for its capabilities may be influenced by external developments that it cannot foresee or influence Pushing the Envelope transcends narrow disciplines commingling aeronautical science and technology business management international business the history of science and technology national security studies and international relations Written in nontechnical language it can easily be understood by a diverse audience including industry and military professionals as well as the general public interested in aviation and technology With Pushing the Envelope Pattillo fills a most conspicuous gap in the literature of both aviation and industrial history Donald M Pattillo is an educational consultant in Acworth Georgia
