Swatton,2008-04-30 The new European Joint Aviation Requirements JARs lay down rules governing the minimum levels of

performance which must be attained by every type of public transport aeroplane. These rules cover matters such as weight, altitude and temperature, take off and landing distance, cruise flight level and speed and descent angle and rate. The subject of aircraft performance forms an important part of all JAR Flight Crew Licensing examinations for commercial and airline transport pilot licences and this book provides a clear but authoritative text on a difficult topic. Aerodynamics and Aircraft Performance James F. Marchman, 2004-08. Aerodynamics and Aircraft Performance 3rd edition is a college undergraduate level introduction to aircraft aerodynamics and performance. This text is designed for a course in Aircraft Performance that is taught before the students have had any course in fluid mechanics, fluid dynamics or aerodynamics. The text is meant to provide the essential information from these types of courses that is needed for teaching basic subsonic aircraft performance and it is assumed that the students will learn the full story of aerodynamics in other later courses. The text assumes that the students will have had a university level Physics sequence in which they will have been introduced to the most fundamental concepts of statics, dynamics, fluid mechanics and basic conservation laws that are needed to understand the coverage that follows. It is also assumed that students will have completed first year university level calculus sequence plus a course in multi variable calculus. Separate courses in engineering statics and dynamics are helpful but not necessary. Any student who takes a course using this text after completing courses in aerodynamics or fluid dynamics should find the chapters of this book covering those subjects an interesting review of the material. The 236 page text was created specifically for use by undergraduate students in Aerospace Engineering and was based on Professor Marchman's many years of experience teaching related subject matter as well as his numerous wind tunnel research projects related to aircraft aerodynamics and his personal experience as the owner and pilot of a general aviation airplane. It has been used at Virginia Tech and other universities.
