Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles 1 An organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions

Foundations of Algorithms Using C++ Pseudocode Richard E. Neapolitan, Kumarss Naimipour, 2004 Foundations of Algorithms Using C Pseudocode Third Edition offers a well balanced presentation on designing algorithms complexity analysis of algorithms and computational complexity The volume is accessible to mainstream computer science students who have a background in college algebra and discrete structures To support their approach the authors present mathematical concepts using standard English and a simpler notation than is found in most texts A review of essential mathematical concepts is presented in three appendices The authors also reinforce the explanations with numerous concrete examples to help students grasp theoretical concepts

Distributed Heterogeneous Multi Sensor Task Allocation Systems Itshak Tkach, Yael Edan, 2019-11-25 Today s real world problems and applications in sensory systems and target detection require efficient comprehensive and fault tolerant multi sensor allocation This book presents the theory and applications of novel methods developed for such sophisticated systems It discusses the advances in multi agent systems and AI along with collaborative control theory and tools Further it examines the formulation and development of an allocation framework for heterogeneous multi sensor systems for various real world problems that require sensors with different performances to allocate multiple tasks with unknown a priori priorities that arrive at unknown locations at unknown time It demonstrates how to decide which sensor to allocate to which tasks when and where Lastly it explains the reliability and availability issues of task allocation systems and includes methods for their optimization The presented methods are explained measured and evaluated by extensive simulations and the results of these simulations are presented in this book This book is an ideal resource for academics researchers and graduate students as well as engineers and professionals and is relevant for various applications such as sensor network design multi agent systems task allocation target detection and team formation
