Algorithms On Trees And Graphs:

Algorithms on Trees and Graphs Gabriel Valiente, 2002-09-05 Graph algorithms is a well established subject in mathematics and computer science Beyond classical application fields such as approximation combinatorial optimization graphics and operations research graph algorithms have recently attracted increased attention from computational molecular biology and computational chemistry Centered around the fundamental issue of graph isomorphism this text goes beyond classical graph problems of shortest paths spanning trees flows in networks and matchings in bipartite graphs Advanced algorithmic results and techniques of practical relevance are presented in a coherent and consolidated way This book introduces graph algorithms on an intuitive basis followed by a detailed exposition in a literate programming style with correctness proofs as well as worst case analyses Furthermore full C implementations of all algorithms presented are given using the LEDA library of efficient data structures and algorithms

[Graph Theory for Programmers](#) Victor N. Kasyanov, Vladimir A. Evstigneev, 2000-08-31 This introductory book treats algorithmic graph theory specifically for programmers It explores some key ideas and basic algorithms in this large and rapidly growing field and contains high level and language independent descriptions of methods and algorithms on trees the most important type of graphs in programming and informatics Readers are assumed to be familiar with the basics of graph theory and programming Audience This volume will be of interest to researchers and specialists in programming software engineering data structure and information retrieval and to mathematicians whose work involves algorithms combinatorics graph theory operations research and discrete optimization The book can also be recommended as a text for graduate courses in computer science electronics telecommunications and control engineering

Graph Theory for Programmers Victor N. Kasyanov, Vladimir A. Evstigneev, 2000-09-14 In delivering lectures and writing books we were most often forced to pay absolutely no attention to a great body of interesting results and useful algorithms appearing in numerous sources and occasionally encountered It was absolutely that most of these results would finally be forgotten because it is impossible to run through the entire variety

of sources where these materials could be published Therefore we decided to do what we can to correct this situation We discussed this problem with Ershov and came to an idea to write an encyclopedia of algorithms on graphs focusing our main attention on the algorithms already used in programming and their generalizations or modifications We thought that it is reasonable to group all graphs into certain classes and place the algorithms developed for each class into a separate book The existence of trees i e a class of graphs especially important for programming also supported this decision This monograph is the first but as we hope not the last book written as part of our project It was preceded by two books Algorithms on Trees 1984 and Algorithms of Processing of Trees 1990 small editions of which were published at the Computer Center of the Siberian Division of the Russian Academy of Sciences The books were distributed immediately and this made out our decision to prepare a combined monograph on the basis of these books even stronger

Graph-Theoretic Concepts in Computer Science Juraj Hromkovič, Manfred Nagl, Bernhard Westfechtel, 2005-01-25 During its 30 year existence the International Workshop on Graph Theoretic Concepts in Computer Science has become a distinguished and high quality computer science event The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can successfully be applied to various areas of computer science and by exposing new theories emerging from applications In this way WG provides a common ground for the exchange of information among people dealing with several graph problems and working in various disciplines Thereby the workshop contributes to forming an interdisciplinary research community The original idea of the Workshop on Graph Theoretic Concepts in Computer Science was ingenuity in all theoretical aspects and applications of graph concepts wherever applied Within the last ten years the development has strengthened in particular the topic of structural graph properties in relation to computational complexity This workshop has become pivotal for the community interested in these areas An aim specific to the 30th WG was to support the central role of WG in both of the prementioned areas on the one hand and on the other hand to promote its originally broader scope The 30th WG was held at the Physikzentrum Bad Honnef which serves as the main meeting point of the German Physical Society It offers a secluded setting for research conferences seminars and workshops and has proved to be especially stimulating for fruitful discussions Talks were given in the new lecture hall with a modern double rear projection interactive electronic board and full video conferencing equipment

Some Fast Algorithms on Graphs and Trees Heather Donnell Booth, 1991 In an effort to improve the space requirement we also present an algorithm which uses $O(m)$ space but runs in $O(m \log m \log \log m)$ time Finally we consider the problem of finding all replacement edges for a minimum spanning tree of a planar graph We present an algorithm for solving this problem which runs in linear time This algorithm also performs sensitivity analysis for the minimum spanning tree shortest path and network flow problems The first two algorithms presented rely on the use of balanced binary trees for efficient representation of data We give an overview of the relevant red black tree and finger tree techniques in this introductory chapter
