Power Engineering Viorel Badescu, George Cristian Lazaroiu, Linda Barelli, 2018-12-07 Traditionally power engineering has been a subfield of energy engineering and electrical engineering which deals with the generation transmission distribution and utilization of electric power and the electrical devices connected to such systems including generators motors and transformers Implicitly this perception is associated with the generation of power in large hydraulic thermal and nuclear plants and distributed consumption Faced with the climate change phenomena humanity has had to now contend with changes in attitudes in respect of environment protection and depletion of classical energy resources These have had consequences in the power

production sector already faced with negative public opinions on nuclear energy and favorable perception of renewable energy resources and about distributed power generation The objective of this edited book is to review all these changes and to present solutions for future power generation Future energy systems must factor in the changes and developments in technology like improvements of natural gas combined cycles and clean coal technologies carbon dioxide capture and storage advancements in nuclear reactors and hydropower renewable energy engineering power to gas conversion and fuel cells energy crops new energy vectors biomass hydrogen thermal energy storage new storage systems diffusion modern substations high voltage engineering equipment and compatibility HVDC transmission with FACTS advanced optimization in a liberalized market environment active grids and smart grids power system resilience power quality and cost of supply plug in electric vehicles smart metering control and communication technologies new key actors as prosumers smart cities The emerging research will enhance the security of energy systems safety in operation protection of environment improve energy efficiency reliability and sustainability The book reviews current literature in the advances innovative options and solutions in power engineering It has been written for researchers engineers technicians and graduate and doctorate students interested in power engineering

Intelligent Capital: Building Self-Governing Financial Architectures in the Cloud Era Vijaya Rama Raju Gottimukkala, 2026-02-10 We are entering an age where capital is no longer merely accumulated it is architected Money used to sit in vaults accounts and portfolios waiting for human instruction Today it lives in code flows through networks reacts to data and increasingly makes decisions without asking permission first The cloud did not just change where software runs it changed how value itself behaves This book explores a simple but radical idea financial systems can be designed to govern themselves For centuries finance has depended on layers of human coordination bankers regulators analysts brokers and institutions acting as the nervous system of capital But cloud infrastructure artificial intelligence and programmable financial primitives are dissolving those layers Capital can now be embedded with logic policy and adaptive behavior It can assess risk in real time allocate resources dynamically enforce compliance automatically and evolve based on environmental signals This shift is not merely technological It is architectural When financial structures become software defined they inherit the properties of modern systems scalability modularity automation and resilience But they also inherit new vulnerabilities governance questions and ethical tensions Who is responsible when autonomous capital acts How do we encode trust What does regulation mean when systems operate across jurisdictions at machine speed Intelligent Capital is not a prediction of a distant future It is a map of a transition already underway from human operated finance to self governing financial architectures The goal of this book is not to celebrate automation nor to resist it but to understand it deeply enough to design it wisely Because in the cloud era the most powerful financial institution may no longer be an organization
