Bioclimatologie Concepts Et Applications:

Bioclimatologie Sané de Parcevaux, Laurent Huber, 2007-10-15 La bioclimatologie étudie les relations entre les écosystèmes cultivés ou naturels et le climat. Les démarches agronomiques et les techniques agricoles peuvent ainsi être améliorées tout en veillant au respect de l'environnement. Les bases physiques et biologiques exposées dans cet ouvrage ainsi que diverses méthodes de mesure ou d'analyse permettent de proposer des alternatives aux approches fondées sur des relations empiriques ou statistiques. Le livre donne aussi de nombreux exemples d'applications qui découlent de ces principes. Public étudiants futurs ingénieurs en agronomie, biologistes, agronomes, météorologie et sciences de l'environnement, professionnels de l'agriculture et chercheurs de disciplines connexes.
