

## Exercises of Chapter 2

### Answer to Exercise 2.3

(a) Let  $Act = \bigcup_{0 < i < j \leq 5} \{r_i, g_i, y_i\}$ . Labeling the transition system  $A_i$  yields:

(b) The controller has to synchronize with the traffic lights. Note that the actions defined in part (a) uniquely identify the  $i$ -th transition system. This is exploited by the controller in the following way. The controller synchronizes with the traffic lights using pairwise handshaking.

(c) Let  $TS_1 \parallel \dots \parallel TS_n$  denote the parallel composition of  $TS_1$  through  $TS_n$ , where  $TS_i$  and  $TS_j$  ( $0 < i < j \leq n$ ) synchronize over the set of actions  $H_{i,j} = Act_i \cap Act_j$  such that  $H_{i,j} \cap Act_k = \emptyset$  for  $k \notin \{i, j\}$ . The inference rules for the transition relation are:

– if  $\alpha \in Act_i \setminus \bigcup_{0 < k < j \leq n} H_{i,j}$  and  $0 < i \leq n$ :

$$\frac{s_i \xrightarrow{\alpha} s'_i}{(s_1, \dots, s_i, \dots, s_n) \xrightarrow{\alpha} (s_1, \dots, s'_i, \dots, s_n)}$$

– if  $\alpha \in H_{i,j}$  and  $0 < i < j \leq n$ :

$$\frac{s_i \xrightarrow{\alpha} s'_i \quad s_j \xrightarrow{\alpha} s'_j}{(s_1, \dots, s_i, \dots, s_j, \dots, s_n) \xrightarrow{\alpha} (s_1, \dots, s'_i, \dots, s'_j, \dots, s_n)}$$

By applying these inference rules, the transition system  $A_1 \parallel A_2 \parallel A_3 \parallel C$  becomes:

Principles of Concurrent and Distributed Programming M. Ben-Ari, 2006 Principles of Concurrent and Distributed Programming provides an introduction to concurrent programming focusing on general principles and not on specific systems. Software today is inherently concurrent or distributed from event based GUI designs to operating and real time systems to Internet applications. This edition is an introduction to concurrency and examines the growing importance of concurrency constructs embedded in programming languages and of formal methods such as model checking.

**Guide to Reliable Internet Services and Applications** Charles R. Kalmanek, Sudip Misra, Yang (Richard) Yang, 2010-06-09 An oft repeated adage among telecommunication providers goes: There are three things that matter: reliability, reliability, time to market and cost. If you can't do all three, at least do the first two. Yet designing and operating reliable networks and services is a Herculean task. Building truly reliable components is unacceptably expensive, forcing us to construct reliable systems out of unreliable components. The resulting systems are inherently complex, consisting of many different kinds of components running a variety of different protocols that interact in subtle ways. Inter-networks such as the Internet span multiple regions of administrative control from campus and corporate networks to Internet Service Providers, making good end-to-end performance a shared responsibility borne by sometimes uncooperative parties. Moreover, these networks consist not only of routers but also lower

layer devices such as optical switches and higher layer components such as rerouters and proxies. And these components are highly configurable leaving ample room for operator error and buggy software. As if that were not difficult enough, end users understandably care about the performance of their higher level applications which has a complicated relationship with the behavior of the underlying network. Despite these challenges, researchers and practitioners alike have made tremendous strides in improving the reliability of modern networks and services.

*Theory and Practice of Cryptography Solutions for Secure Information Systems* Elçi, Atilla, Pieprzyk, Josef, Chefranov, Alexander G., Orgun, Mehmet A., Wang, Huaxiong, Shankaran, Rajan, 2013-05-31 Information Systems IS are a nearly omnipresent aspect of the modern world playing crucial roles in the fields of science and engineering, business and law, art and culture, politics and government and many others. As such, identity theft and unauthorized access to these systems are serious concerns. *Theory and Practice of Cryptography Solutions for Secure Information Systems* explores current trends in IS security technologies, techniques and concerns primarily through the use of cryptographic tools to safeguard valuable information resources. This reference book serves the needs of professionals, academics and students requiring dedicated information systems free from outside interference as well as developers of secure IS applications. This book is part of the *Advances in Information Security, Privacy and Ethics* series collection.

**Information Technology for Education, Science, and Technics** Emil Faure, Yurii Tryus, Tero Vartiainen, Olena Danchenko, Maksym Bondarenko, Constantine Bazilo, Grygoriy Zaspas, 2024-10-07 This book explores issues related to information and communication technology in management and higher education, intelligent computing and information security. In this book, the authors investigate various aspects of information and communication technology and systems, their development and applications in education, science and management. The authors develop new models, methods and approaches for digital transformation in management processes, including digital project management, intelligent systems, particularly those that deploy artificial intelligence, data protection and reliability. Verification and Evaluation of Computer and Communication Systems Belgacem Ben Hedia, Yu-Fang Chen, Gaiyun Liu, Zhenhua Yu, 2020-12-19 This book constitutes the proceedings of the 14th International Conference on Verification and Evaluation of Computer and Communication Systems (VECoS 2020) which was supposed to be held in Xi'an, China in October 2020 but was held virtually instead. The 19 full papers and 1 short paper presented in this volume were carefully reviewed and selected from 60 submissions. The aim of the VECoS conference is to bring together researchers and practitioners in the areas of verification, control performance and dependability evaluation in order to discuss state of the art and challenges in modern computer and communication systems in which functional and extra-functional properties are strongly interrelated. Thus, the main motivation for VECoS is to encourage the cross

fertilization between various formal verification and evaluation approaches methods and techniques and especially those developed for concurrent and distributed hardware software systems The papers are organized in the following topical sections petri net simulation and scheduling formal modeling and verification testing and artificial intelligence and machine learning
