Finding Answers History! Religion! Science! Pauline Schiappa,2018-04-28 A mysterious and tremendous thing comes to reveal itself in the course of the lifetime of an earthly human So mysteriously confronted by it the earthly human becomes awed by this compelling human attribute The earthly human becomes so enraptured by it that he begins to consider it as a quality that defines and explains his human nature The earthly human desires to know the earthly human desires to understand that which his physical body sense experiences of earthly reality The earthly human holds so much psychological and intellectual desire toward knowing it that he gives it a name truth How does the earthly human discover truth

Concept Progress Leo Indman,2017-04-22 Concept Progress is a fusion of science fiction and philosophy It is a metaphysics that centers on progress being a driving force in human evolution This recurring viewpoint has previously stirred much debate However as we escalate through the 21st century the evidence is plentiful Concept Progress offers a fresh perspective into the topic citing humanity s ongoing accomplishments as a convincing piece of that evidence In the book we celebrate ourselves for our achievements challenge our perceived limits and conclude that progress will eventually produce the most evolved life form In so doing we look back to the beginning of time and circle forward to a time that is farther away than the current age of the universe While the tone of the book s body resembles that of a philosophical prose with each chapter the reader realizes more and more that the narrative is actually one of science fiction The intent of the book s structure and approach is manifold First it is safe to say that any literature that points to the future is already by definition a work of fiction no matter how serious it tries to sound Imagining future technologies foreseeing the next stages of human evolution and exploring the realm of the highest dimension surely makes it a science fiction Second the book is a collection of concepts abstract notions of the mind that reflect our grasp on certain aspects of reality It is also a play on those concepts exposing how our progressive understanding of these notions can gradually be transcended Each chapter starts with a sketch of a particular concept whose humanistic yet quantum mechanical context lets us identify with it and be mystified by it From the concepts of sound and light to the concepts of consciousness and coexistence each concept tale depicts a personal expression of our mutual worldview Third each one of the ten chapters concludes with a short sci fi story These stories project the theme further and subtly point to each other As we connect the dots from one story to another the outline reveals a world that makes us wonder whether we are headed toward its future or whether we will bypass it as an alternate universe In one story we meet the inventor of mind reading technology while in another story we meet an artificial life form that will be made possible by this technology Yet another story is about the time traveling mind of an astrophysicist whose life s work has impacts on whole timelines as revealed by a different story In the end it all comes together with the final piece of the puzzle completing not only the short story series but also the novel as a whole Each three part chapter is a triad with a distinct purpose in mind We begin the journey with our own curiosity This basic emotion allows us to open the

door to that which we are so curiously seeking Essentially that covers everything In questioning the entirety of existence we commence with the premise that it is the element of life that sends us on a quest for meaning So we review the trend of life s evolution on Earth from its roots to the present day and follow this trend into the distant future The process of evolutionary development leads us to a recipe for one s own personal progress which is comprised of physical mental and spiritual ingredients It soon becomes clear that a species can change only insofar as its individual members embrace this change And we realize that our choice in the matter has impacts not only on our own future but also on the future of everyone who shares our timeline In some ways *Concept Progress* is a modern commentary of Charles Darwin s revolutionary theory of evolution In other ways it is an encouraging observation of our humble human existence As we widen the time scale and follow an evolutionary trend from biological social and cosmic angles the concepts of evolution and progress slowly but surely become synonymous

Horizons James Poskett,2022-03-22 The history of science as it has never been told before a tale of outsiders and unsung heroes from far beyond the Western canon that most of us are taught When we think about the origins of modern science we usually begin in Europe We remember the great minds of Nicolaus Copernicus Isaac Newton Charles Darwin and Albert Einstein But the history of science is not and has never been a uniquely European endeavor Copernicus relied on mathematical techniques that came from Arabic and Persian texts Newton s laws of motion used astronomical observations made in Asia and Africa When Darwin was writing *On the Origin of Species* he consulted a sixteenth century Chinese encyclopedia And when Einstein studied quantum mechanics he was inspired by the Bengali physicist Satyendra Nath Bose *Horizons* is the history of science as it has never been told before uncovering its unsung heroes and revealing that the most important scientific breakthroughs have come from the exchange of ideas from different cultures around the world In this ambitious revelatory history James Poskett recasts the history of science uncovering the vital contributions that scientists in Africa America Asia and the Pacific have made to this global story

Horizontes James Poskett, 2022-05-04

Solemos pensar que la ciencia moderna se inventó en Europa producto de grandes mentes como Nicolás Copérnico Isaac Newton Charles Darwin o Albert Einstein Pero esto es un error La ciencia no es ni ha sido nunca un empeño exclusivamente europeo Copérnico se basó en técnicas matemáticas tomadas de textos árabes y persas Cuando Newton estableció las leyes del movimiento se basó en observaciones astronómicas realizadas en Asia y África Cuando Darwin escribió *El origen de las especies* consultó una enciclopedia china del siglo XVI Y cuando Einstein estudiaba la mecánica cuántica se inspiró en el físico bengalí Satyendra Nath Bose

Horizontes va más allá de Europa explorando las formas en que los científicos de África América Asia y el Pacífico encajan en la historia de la ciencia que se entiende mejor como una historia de intercambio cultural global Con una poderosa fuerza narrativa James Poskett nos lleva en un viaje en el tiempo alrededor del mundo y rastrea los orígenes de la ciencia moderna desde los palacios de los aztecas hasta las universidades chinas cuenta la historia de los pioneros olvidados de los grandes conocimientos

The Joy of Physics Arthur W. Wiggins, 2007 Introduces the science of physics covering such topics as matter motion and magnetism profiles important physicists including Albert Einstein and Enrico Fermi and features simple experiments to demonstrate key concepts

Mechanisms and Functions of Brain and Behavioural Asymmetries Royal Society (Great Britain). Discussion Meeting, 2009 **Global Journalist**, 2004 *Designing Universal Knowledge* Gerlinde Schuller, 2009 This publication draws upon historical milestones to explore the meaning of universal knowledge as well as the process of collecting structuring designing and publishing it [Ableitung personaler Wissensdomänen aus Navigationspfaden in einer Online-Enzyklopädie - Implementierung eines Prototyps „Simpedia“](#) Marcel Minke, 2013-01-25 Doktorarbeit Dissertation aus dem Jahr 2012 im Fachbereich Informatik Angewandte Informatik Note 1,0 Universität Hildesheim Stiftung Mathematik Naturwissenschaften Wirtschaft und Informatik Sprache Deutsch Abstract In der heutigen Informationsgesellschaft erweist sich der effiziente Umgang mit dem Produktionsfaktor Wissen als entscheidender Wettbewerbsfaktor Aufgrund der geringeren Halbwertszeit des Wissens tritt das reine Faktenlernen zunehmend in den Hintergrund das Lernen von Zusammenhängen gewinnt demgegenüber an Bedeutung Diese Dissertationsschrift beschreibt einen auf der deutschen Wikipedia basierenden Prototyp der zum einen zum automatisierten Abfragen von Zusammenhängen

genutzt werden kann und zum anderen ein neuartiges didaktisches Konzept zum Lernen von Assoziationen einführt. Zur Definition von Wissensdomänen werden Algorithmen vorgestellt, die die einem Wikipedia-Artikel zugeordneten Kategorien auf vordefinierte Hauptkategorien aggregieren. Da Daten zu inhaltlichen Zusammenhängen zwischen verschiedenen Wikipedia-Einträgen bisher noch nicht erhoben wurden, stellt diese Arbeit solche Assoziationen anhand der semantischen Ähnlichkeit her, die durch zwei Programme namens Findlink und SENTRAX berechnet wird. Die so generierte Liste ähnlicher Artikel formt ein spezielles Netz, in dem die Knoten einzelne Wikipedia-Artikel darstellen und die Kanten inhaltliche Zusammenhänge abbilden. Die Assoziationen werden anschließend in die Oberfläche des Prototyps integriert und um Mechanismen zum Tracken der Benutzerinteraktion erweitert. Ein Kernproblem des Versuchsaufbaus stellt der Korpusumfang dar. Einerseits führt die enorme Artikelanzahl bei der Ähnlichkeitsberechnung durch Findlink zu Performanceproblemen, andererseits zeigen sich aufgrund der Vielzahl der Einträge Anomalien in der Netzstruktur der ähnlichen Artikel in Form vieler untereinander kaum verbundener Teilnetze. Als Problemlösungen werden mehrere Filterkriterien definiert, und deren Auswirkungen auf den Korpusumfang skizziert. Zusätzlich wird ein eigenes Gema eingeführt, das sich als hilfreich bei der Beurteilung der Relevanz eines Artikels erweist. Die im entwickelten Prototyp implementierten Konzepte ermöglichen das spielerische Lernen von Zusammenhängen durch die Bearbeitung von flexibleren oder vordefinierten Navigationsaufgaben. Darüber hinaus kann der erstellte Prototyp als Ausgangspunkt für weitere Forschungen zum Lernen von Zusammenhängen dienen. Das implementierte Tracking der Benutzerinteraktion legt die Basis für spätere Auswertungsalgorithmen.
