Algebra Artin 2nd Edition :

Algebra Michael Artin, 2011 Algebra Second Edition by Michael Artin is ideal for the honors undergraduate or introductory graduate course. The second edition of this classic text incorporates twenty years of feedback and the author's own teaching experience. The text discusses concrete topics of algebra in greater detail than most texts, preparing students for the more abstract concepts. Linear algebra is tightly integrated throughout. Publisher's description: *Introduction to the Galois Correspondence* Maureen H. Fenrick, 2012-12-06. In this presentation of the Galois correspondence, modern theories of groups and fields are used to study problems, some of which date back to the ancient Greeks. The techniques used to solve these problems rather than the solutions themselves are of primary importance. The ancient Greeks were concerned with constructibility problems. For example, they tried to determine if it was possible using straightedge and compass alone to perform any of the following tasks: 1. Double an arbitrary cube (in particular, construct a cube with volume twice that of the unit cube). 2. Trisect an arbitrary angle. 3. Square an arbitrary circle (in particular, construct a square with area $1/r$). 4. Construct a regular polygon with n sides for $n \geq 2$. If we define a real number c to be constructible if and only if the point $(c, 0)$ can be constructed starting with the points $(0, 0)$ and $(1, 0)$, then we may show that the set of constructible numbers is a subfield of the field \mathbb{R} of real numbers containing the field \mathbb{Q} of rational numbers. Such a subfield is called an intermediate field of \mathbb{R}/\mathbb{Q} . We may thus gain insight into the constructibility problems by studying intermediate fields of \mathbb{R}/\mathbb{Q} . In chapter 4, we will show that 1 through 3 are not possible and we will determine necessary and sufficient conditions that the integer n must satisfy in order that a regular polygon with n sides be constructible. **Algebra** L. Rédei, 2014-07-21. Compared with the original German edition, this volume contains the results of more recent research which have to some extent originated from problems raised in the previous German edition. Moreover, many minor and some important modifications have been carried out. For example, paragraphs 2-5 were amended and their order changed. On the advice of G. Pickert, paragraph 7 has been thoroughly revised. Many improvements originate from H. J. Weinert, who by enlisting the services of a working team of the Teachers Training College of Potsdam, has subjected large parts of this book to an exact and constructive review. This applies particularly to paragraphs 9, 50, 51, 60, 63, 66, 79, 92, 94, 97, and 100, and to the exercises. In this connection, paragraphs 64 and 79 have had to be partly rewritten in consequence of the correction. Mathematical Tools for Data Mining Dan A. Simovici, Chabane Djeraba, 2014-03-27. Data mining essentially relies on several mathematical disciplines, many of which are presented in this second edition of this book. Topics include partially ordered sets, combinatorics, general topology, metric spaces, linear spaces, graph theory. To motivate the reader, a significant number of applications of these mathematical tools are included, ranging from association rules, clustering algorithms, classification, data constraints, logical data analysis, etc. The book is intended as a reference for researchers and graduate students. The current edition is a significant expansion of the first edition. We strived to make the book self-contained, and only a general knowledge of mathematics is required. More than

700 exercises are included and they form an integral part of the material Many exercises are in reality supplemental material and their solutions are included

Rings with Polynomial Identities and Finite Dimensional Representations of Algebras Eli Aljadeff,Antonio Giambruno,Claudio Procesi,Amitai Regev,2020-12-14

A polynomial identity for an algebra or a ring A A is a polynomial in noncommutative variables that vanishes under any evaluation in A A An algebra satisfying a nontrivial polynomial identity is called a PI algebra and this is the main object of study in this book which can be used by graduate students and researchers alike The book is divided into four parts Part 1 contains foundational material on representation theory and noncommutative algebra In addition to setting the stage for the rest of the book this part can be used for an introductory course in noncommutative algebra An expert reader may use Part 1 as reference and start with the main topics in the remaining parts Part 2 discusses the combinatorial aspects of the theory the growth theorem and Shirshov s bases Here methods of representation theory of the symmetric group play a major role Part 3 contains the main body of structure theorems for PI algebras theorems of Kaplansky and Posner the theory of central polynomials M Artin s theorem on Azumaya algebras and the geometric part on the variety of semisimple representations including the foundations of the theory of Cayley Hamilton algebras Part 4 is devoted first to the proof of the theorem of

Razmyslov Kemer and Braun on the nilpotency of the nil radical for finitely generated PI algebras over Noetherian rings then to the theory of Kemer and the Specht problem Finally the authors discuss PI exponent and codimension growth This part uses some nontrivial analytic tools coming from probability theory The appendix presents the counterexamples of Golod and Shafarevich to the Burnside problem *Mathematical Evolutions* Abe Shenitzer, John Stillwell, 2020-08-03 *The New Encyclopaedia Britannica: Macropaedia : Knowledge in depth*, 2003 *Selected Papers on Algebra* Susan Montgomery, Elizabeth W. Stoyanov, 1992 The behaviour of reflecting rays plays an essential role in many problems of mathematical physics This book studies different geometric properties of reflecting rays for manifolds with smooth boundary and their applications to different inverse spectral and scattering problems This is a developing area in which the authors have made important contributions Results concerning the particular problems studied and which arise in several important domains of modern physics are presented Some chapters concerning the generic properties of reflecting rays can be used for courses for graduate students *Error Analysis in Numerical Processes* Solomon Grigor'evich Mikhlin, 1991-09-27 Very Good No Highlights or Markup all pages are intact *Paperbound Book Guide for Colleges*, 1974 [Accessions List](#) University of London.
