Potter,2025-10-14 An examination of how production processes from penicillin to steel to semiconductors get more efficient over time and a powerful argument for efficiency as an underrated driver of progress Efficiency is the engine that powers human civilization It s the reason rates of famine have fallen precipitously literacy has risen and humans are living longer healthier lives compared to preindustrial times But where do improvements in production efficiency come from In The Origins of Efficiency Brian Potter argues that improving production efficiency finding ways to produce goods and services in less time with less labor using fewer resources is the force behind some of the biggest and most consequential changes in human history With unprecedented depth and detail Potter examines the fundamental characteristics of a production process and how it can be made less time and resource intensive and therefore less expensive The book is punctuated with examples of production efficiency in practice including how high yield manufacturing methods made penicillin the miracle drug that reduced battlefield infection deaths by 80 percent during World War II the 100 year history of process improvements in incandescent light bulb production and how automakers like Ford Toyota and Tesla developed innovative production methods that transformed not just the automotive industry but manufacturing as a whole He concludes by looking at sectors where production costs haven t fallen and explores how we might harness the mechanisms of production efficiency to change that The Origins of Efficiency is a comprehensive companion for anyone seeking to understand how we arrived at this age of relative abundance and how we can push efficiency improvements further into domains like housing medicine and education where much work is left to be done **Essentials in Fermentation Technology** Aydin Berenjian,2019-07-15 This textbook teaches the principles and applications of fermentation technology bioreactors bioprocess variables and their measurement key product separation and purification techniques as well as bioprocess economics in an easy to understand way The

multidisciplinary science of fermentation applies scientific and engineering principles to living organisms or their useful components to produce products and services beneficial for our society Successful exploitation of fermentation technology involves knowledge of microbiology and engineering Thus the book serves as a must have guide for undergraduates and graduate students interested in Biochemical Engineering and Microbial Biotechnology **BrewingScience Yearbook 2022** Fachverlag Hans Carl GmbH,2023-02-13 This publication is a compilation of the articles published in the BrewingScience bimonthly online journal in 2022 The yearbook is full of new insights ranging from hop and practical yeast matters all the way to use of new methods such as CospR Cas9 in the brewing industry Contributions extending beyond the horizons of the brewing industry round off the range of topics **Design for Rethinking Resources** Mette Ramsgaard Thomsen,Carlo Ratti,Martin Tamke,2023-11-16 The book provides new perspectives from leading researchers accentuating and examining the central role of the built environment in conceiving and implementing multifaceted solutions for the complex challenges of our understanding of planetary resources and circularity revealing critical potentials for architecture and design to contribute in more informed and long term ways to the urgent transition of our society The book offers a compilation of peer reviewed papers that uniquely connects knowledge broadly across practice and academia from the newest technologies and methods such as the role of digital modelling analysis and fabrication in circular design i e material passports cyber physical augmentation and LCA to the potentials of growing and harvesting biomass materials engaging waste streams in material production and more all in context of economic social and ecological potentials and consequences The book is part of a series of six volumes that explore the agency of the built environment in relation to the SDGs through new research conducted by leading researchers The series is led by editors Mette Ramsgaard Thomsen and Martin Tamke in collaboration with the theme editors Design for Climate Adaptation Billie Faircloth and Maibritt Pedersen Zari Design for Rethinking Resources Carlo Ratti and Mette Ramsgaard Thomsen Eds Design for Resilient Communities Anna Rubbo and Juan Du Eds Design for Health Arif Hasan and Christian Benimana Eds Design for Inclusivity Magda Mostafa and Ruth Baumeister Eds Design for Partnerships for Change Sandi Hilal and Merve Bedir Eds **The History of Alternative Test Methods in Toxicology** ,2018-10-20 The History of Alternative Test Methods in Toxicology uses a chronological approach to demonstrate how the use of alternative methods has evolved from their conception as adjuncts to traditional animal toxicity tests to replacements for them This volume in the History of Toxicology and Environmental Health series explores the history of alternative test development validation and use with an emphasis on humanity and good science in line with the Three Rs Replacement Reduction Refinement concept expounded by William Russell and Rex Burch in 1959 in their now classic volume The Principles of Humane Experimental Technique The book describes the historical development of technologies that have influenced the application of alternatives in toxicology and safety testing These range from single cell monocultures to sophisticated miniaturised and microfluidic organism on a chip devices and also include molecular modelling

chemoinformatics and QSAR analysis and the use of stem cells tissue engineering and hollow fibre bioreactors This has been facilitated by the wider availability of human tissues advances in tissue culture analytical and diagnostic methods increases in computational processing capabilities and a greater understanding of cell biology and molecular mechanisms of toxicity These technological developments have enhanced the range and information content of the toxicity endpoints detected and therefore the relevance of test systems and data interpretation while new techniques for non invasive diagnostic imaging and high resolution detection methods have permitted an increased role for human studies Several key examples of how these technologies are being harnessed to meet 21st century safety assessment challenges are provided including their deployment in integrated testing schemes in conjunction with kinetic modelling and in specialised areas such as inhalation toxicity studies
