Global pattern and trend of liver cancer survival: a systematic review of population-based studies Yu-Fei Jiang, Zhuo-Ying Li, Xiao-Wei Ji, Qiu-Ming Shen, Jia-Yi Tuo, Hui-Yun Yuan, Yong-Bing Xiang, 2020-08-15 Aim To describe the global pattern and trend of liver cancer survival using data from the population based studies or cancer registration Methods By searching CNKI Wanfang Data PubMed Web of Science EMBASE and SEER All population based survival studies of liver cancer from 1 January 2000 to 30 April 2020 were collected and evaluated by patient gender time period and country The overall or age standardized five year relative survival rate was used to describe the pattern and changes in liver cancer survival over the past decades Results Globally the highest age standardized five year relative survival rate was observed in Italy 18 0% 2005 2007 and the highest overall five year relative survival rate was observed in Korea 34 6% 2012 2016 when compared to other countries The most remarkable increase in overall five year relative survival rate can be seen in Korea from 10 7% during 1993 1995 to 34 6% during 2012 2016 In general worldwide the five year relative survival rate of younger patients with liver cancer was higher than old people For most countries the five year relative survival rate of liver cancer was slightly higher in women than in men In China the overall five year relative survival rate of liver cancer in Taiwan was higher than that in other areas while Cixian of Hebei and Qidong of Jiangsu were lower Conclusion Over the past decades the survival rates of liver cancer have gradually improved but great variations are also observed globally Worldwide younger patients with liver cancer have experienced a better prognosis Gender disparity in liver cancer survival was not obvious

Deep-Sea Food Chains and the Global Carbon Cycle G.T. Rowe,Vita Pariente,2012-12-06

Carbon dioxide and other greenhouse gases are increasing in the atmosphere due to the burning of fossil fuels the destruction of rain forests etc leading to predictions of a gradual global warming which will perturb the global biosphere An important process which counters this trend toward potential climate change is the removal of carbon dioxide from the surface ocean by photosynthesis This process packages carbon in phytoplankton which enter the food chain or sink into the deep sea Their ultimate fate is a rain of organic debris out of the surface mixed layer of the ocean On a global scale the mechanisms and overall rate of this process are poorly known The authors of the 25 papers in this volume present their state of the art approaches to quantifying the mechanisms by which the rain of biogenic debris nourishes deep ocean life Prominent deep sea ecologists geochemists and modelers address relationships between data and models of carbon fluxes and food chains in the deep ocean An attempt is made to estimate the fate of carbon in the deep sea on a global scale by summing up the utilization of organic matter among all the populations of the abyssal biosphere Comparisons are made between these ecological approaches and estimates of geochemical fluxes based on sediment trapping one dimensional geochemical models and horizontal physical input from continental margins Planning interdisciplinary enterprises between geochemists and ecologists including new field programs are summarized in the final chapter The summary includes a list of the important gaps in understanding which must be addressed before the role of the deep sea biota in global scale processes can be put in perspective

Analysis and Comparison of Metaheuristics Erik Cuevas,Omar Avalos,Jorge Gálvez,2022-11-02 This book presents a comparative perspective of current metaheuristic developments which have proved to be effective in their application to several complex problems The study of biological and social entities such as animals humans or insects that manifest a cooperative behavior has produced several computational models in metaheuristic methods Although these schemes emulate very different processes or systems the rules used to model individual behavior are very similar Under such conditions it is not clear to identify which are the advantages or disadvantages of each metaheuristic technique The book is compiled from a teaching perspective For this reason the book is primarily intended for undergraduate and postgraduate students of Science Electrical Engineering or Computational Mathematics It is appropriate for courses such as Artificial Intelligence Electrical Engineering Evolutionary Computation The book is also useful for researchers from the evolutionary and engineering communities Likewise engineer practitioners who are not familiar with metaheuristic computation concepts will appreciate that the techniques discussed are beyond simple theoretical tools since they have been adapted to solve significant problems that commonly arise in engineering areas
