Agile Project Dynamics Firas S. Glaiel,Massachusetts Institute of Technology. Engineering Systems Division,2012 Large scale software engineering organizations have traditionally used plan driven heavyweight waterfall style approaches for the planning execution and monitoring of software development efforts This approach often results in relatively long development schedules that are susceptible to failure especially in a rapidly changing environment Schedule pressure defects and requirements changes can drive endless redesign delay the project and incur extra cost Many in the commercial software world have dealt with these pressures by adopting Agile Software Development an approach designed to be flexible and responsive to high change environments Software development teams that are said to employ Agile development in effect practice a variety of agile methods These practices are advertised to reduce coordination costs to focus teams and to produce stable product iterations that can be released incrementally Agile software development has become a de facto approach to the engineering of software systems in the commercial world and is now entering the aerospace and defense sectors The APD model developed in this research aids in the understanding of the impact that alternative combinations of Agile practices combined with different management policies have on project performance compared to a waterfall approach This research culminates in a formulation of insights and recommendations for how to integrate Agile practices into a large scale software engineering organization
