An Introduction to Geotechnical Engineering Robert D. Holtz, William D. Kovacs, 1981 A descriptive elementary introduction to geotechnical engineering with applications to civil engineering practice focuses on the engineering classification behavior and properties of soils necessary for the design and construction of foundations and earth structures introduces vibratory and dynamic compaction the method of fragments the Schmertmann procedure for determining field compressibility secondary compression liquefaction and an extensive use of the stress path method **Introductory**

Geotechnical Engineering Hsai-Yang Fang, John L. Daniels, 2017-12-21 Integrating and blending traditional theory with particle energy field theory this book provides a framework for the analysis of soil behaviour under varied environmental conditions This book explains the why and how of geotechnical engineering in an environmental context Using both SI and Imperial units the authors cover rock mechanics soil mechanics and hydrogeology soil properties and classifications and issues relating to contaminated land Students of civil geotechnical and environmental engineering and practitioners unfamiliar with the particle energy field concept will find that this book's novel approach helps to clarify the complex theory behind geotechnics **Aquananotechnology** David E. Reisner, T. Pradeep, 2014-09-24 The world's fresh water supplies are

dwindling rapidly even wastewater is now considered an asset By 2025 most of the world's population will be facing serious water stresses and shortages Aquananotechnology Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies produced water from fracking ballast water and more It also discusses membranes desalination sensing engineered polymers magnetic nanomaterials electrospun nanofibers photocatalysis endocrine disruptors and Al13 clusters It explores physics based phenomena such as subcritical water and cavitation induced sonoluminescence and fog harvesting With contributions from experts in developed and developing countries including those with severe contamination such as China India and Pakistan the book's content spans a wide range of the subject areas that fall under the aquananotechnology banner either squarely or tangentially The book strongly emphasizes sorption media with broad application to a myriad of contaminants both geogenic and anthropogenic keeping in mind that it is not enough for water to be potable it must also be palatable **Introduction to Geotechnical Engineering + Mindtap Engineering**
