## PADI - ENRICHED AIR DIVER REVIEW

### QUESTIONS WITH CORRECT ANSWERS 2025

The primary benefit of using enriched air nitrox is that it - CORRECT ANSWER -

The primary benefit of using enriched air is longer no stop (no decompression) dive times. It is not a suitable deep diving gas due to oxygen exposure, and there is no substantiated evidence that it makes you feel better.

When using EANx, you should expect narcosis to be - CORRECT ANSWER -

Although enriched air has less nitrogen than air does, oxygen has been shown to be about as narcotic as nitrogen. Therefore, you should expect little difference between diving nitrox and air with respect to narcosis.

The primary concern regarding enriched air nitrox and equipment is high oxygen content. -

CORRECT ANSWER -

The primary concern regarding nitrox is the high oxygen content because some materials more readily burn, or even explode, in the presence of oxygen.

The recommendations for using equipment, other than cylinders, with enriched air with up to 40% oxygen, include that (choose all that apply) - CORRECT ANSWER -

Generally, for all equipment except your cylinder you can use regular scuba equipment with enriched air with up to 40% oxygen. However, local laws, standards or practices may require special fittings or cleanings; follow these if they apply. In any case, during servicing, oxygen compatible lubricants, as well as other materials, are generally recommended.

The potential hazards of improper enriched air filling procedures include (choose all that apply) -

CORRECT ANSWER -

The primary hazards are fire or explosion hazard due to high oxygen content coming in contact with combustible substances, and inaccuracies in the blend leading to uncertainty of what the final blend is. Nothing about blending would affect the potential for narcosis, nor likely affect the reliability of a scuba regulator.

The markings that, according to broadly accepted dive community practices, you should have on a scuba cylinder used for enriched air nitrox include (choose all that apply) - CORRECT ANSWER -

The minimum markings on an enriched air cylinder include all the markings required of an air cylinder, plus a band around the cylinder shoulder reading NITROX, ENRICHED AIR or the like. Yellow cylinders should have a 10 centimetre/4 inch green band. Non yellow cylinders should have a 15 centimetre/6 inch band. The top and bottom of this band should be a yellow, 2.5 cm/1 in. band, with the center 10 cm/4 in.
