Pro Spring 3 Rob Harrop, Clarence Ho, 2012-06-13 The agile lightweight open source Spring Framework continues to be the de facto leading enterprise Java application development framework for today's Java programmers and developers. It works with other leading open source agile and lightweight Java technologies like Hibernate, Groovy, MyBatis, and more. Spring now also works with Java EE and JPA 2 as well. Pro Spring 3 updates the bestselling Pro Spring with the latest that the Spring Framework has to offer: version 3.1. At 1000 pages, this is by far the most comprehensive Spring book available, thoroughly exploring the power of Spring. With Pro Spring 3, you'll learn Spring basics and core topics and gain access to the authors' insights and real-world experiences with remoting, Hibernate, and EJB. Beyond the basics, you'll learn how to leverage the Spring Framework to build various tiers or parts of an enterprise Java application, like transactions, the web, and presentations, tiers, deployment, and much more. A full sample application allows you to apply many of the technologies and techniques covered in this book and see how they work together. After reading this definitive book, you'll be armed with the power of Spring to build complex Spring applications, top to bottom.

Pro Wicket Karthik Gurusamy, 2007-02-01 The SourceForge open source lightweight Wicket project is a Java web application framework that takes simplicity, separation of concerns, and ease of development to a new level. Benchmarking as a Foundation of the Future Economy Berezin Artiom Andreevich, 2020-09-02 This book explores how to increase the efficiency of decision making for enterprise management and increase its competitiveness based on mathematical modeling of the benchmarking process, predictive modeling of the dynamics of economic performance indicators, and the synthesis and selection of development strategies using software tools. It argues that instead of mutually devouring competition, which is common in the modern world, the model of friendly cooperative benchmarking, on the principle of win-win, is proposed for consideration. The advantage of this principle over the classic competitiveness one is proved through mathematical modeling and implementation of this approach in the activities of real companies, banks, and industrial enterprises.
