Ruggiero, 1997-07-01 The computer can do more than show us pretty pictures. It can optimize, backtest, prove or disprove old theories, eliminate the bad ones and make the good ones better.

Cybernetic Trading Strategies explores new ways to use the computer and finds ways to make a valuable machine even more valuable. Foreword by John J. Murphy. Until recently the computer has been used almost exclusively as a charting and data gathering tool. But as traders and analysts have quickly discovered its capabilities are far more vast. Now in this groundbreaking new book Murray Ruggiero, a leading authority on cybernetic trading systems, unlocks their incredible potential and provides an in-depth look at the growing impact of advanced technologies on intermarket analysis. A unique resource, **Cybernetic Trading Strategies** provides specific instructions and applications on how to develop tradable market timing systems using neural networks, fuzzy logic, genetic algorithms, chaos theory and machine induction methods. Currently utilized by some of the most powerful financial institutions in the world including John Deere and Fidelity Investments, today's advanced technologies go beyond subjective interpretations of market indicators to enhance traditional analysis. As a result, existing trading systems gain a competitive edge. Ruggiero reveals how incorporating elements of statistical analysis, spectral analysis, neural networks, genetic algorithms, fuzzy logic and other high-tech concepts into a traditional technical trading system can greatly improve the performance of standard trading systems. For example, spectral analysis can be used to detect
